R. R. FIGHT MAY CENTER IN PRIORITY

Western Pacific Seeks To Halt Building S. P. Track

A petition by the City of San Mateo to prevent the completion of the spur track by the Southern Pacific, which has caused so much speculation during the past week will be heard before Judge George H. Buck on next Thursday. The hearing was set for yesterday, but was continued until the latter date at the request of the Southern Pacific.

The petition followed the laying of a track by the Southern Pacific workmen near San Mateo. The track is generally regarded as an attempt on the part of the Southern Pacific to block the construction of a peninsula line by the Western Pacific Company. The latter company is now fighting the move in the court of Federal Judge Kerrigan in San Francisco. The petition for an injunction by the City of San Mateo grew out of the fact that some sewer rights of way owned by the city have been crossed by the railroad company in the construction of their track.

The Southern Pacific will also probably meet with legal difficulties from the California Highway Commission, as the line of the track will cross the proposed route of the Bayshore highway between this city and San Mateo.

In the fight in the Federal court, the Western Pacific is represented by Judge Warren Olney Jr., A. S. Hutchinson and A. P. Mathews. The Southern Pacific is represented by Charles Burbrow and Henley C. Booth.

Durbrow and Booth sought to have the injunction dissolved and the case thrown out of the Federal Court, contending that only a railroad crossing was involved in it and this was a matter for the State Railroad Commission.

Judge Olney contended, on the contrary, that a priority of location was at stake; that the Western Pacific acquired this before applying to the Interstate Commerce Commission for a building permit.

"As for the crossing," he said, "the great advantage rests with the railroad first laying its steel. If the Southern Pacific later can force us to go to the State Commission for permission to cross its tracks it can cause immeasurable delay to the Western Pacific's projected line down the peninsula."

"If the Southern Pacific had this trackage under consideration since 1925, as it claims, why did it do nothing until it discovered the Western Pacific sought to build and, by building, create a new industrial area? Its new rail s are isolated, without beginning, without end. But they serve as a starting point for north and south tracks that could block the Western Pacific all the way from San Francisco to Redwood City."

Southern Pacific counsel stressed the point that the Western Pacific is engaged in no construction on the Peninsula at this time; that there is no certainty that the Interstate Commerce Commission will authorize its building program; that there is nothing to show the Southern Pacific intends to build north and south lines east of the highway, along the Western Pacific's "indefinite."

Request of S. P. Denied by Board

The request of the Southern Pacific Company for permission to remove safety gates from the Brewster street crossing and a flagman from the Spruce street crossing and replace them by wig-wag signals were denied by the city council this week. The request of the railroad company was made through E. R. Anthony, superintendent of the Coast Division.

Both of these crossings are on busy thoroughfares, and both demand the utmost protection in the opinion of the city council. The Brewster street crossing is immediately adjacent to the Mt. Carmel parochial school, and practically all of the children attending this institution must cross this crossing at least twice a day. The Spruce street crossing is on one of the main connecting links between the state highway and the Middlefield road.

Taxi Man Hurt In Fall Against Curb

C. F. Tammany, taxi man with a stand on Winslow street, is in the Letterman General Hospital at the Presidio in a serious condition as the result of a fall Wednesday afternoon. Tammany was standing by his car near the S. P. station when he either slipped and fell or suffered a stroke. In either case he fell and struck his head on the cement curb.

At the hospital it was stated that he had received a fracture of the skull, and his condition was considered as very serious yesterday. Tammany is a veteran of the Spanish-American war and a member of Camp Kelly United Spanish War Veterans.

School Trustees Both Re-Elected

Both Walter T. Kellogg and Clarence Dossie were re-elected as trustees of the Sequoia Union High School District and of the Redwood City School District, respectively, last Friday. Both men ran without opposition and both received a large majority vote.

Kellogg is manager in the district of the Pacific Gas and Electric Co., and Dossie is president of the San Mateo County Title Company. Both men have had years of experience on their respective boards and both have shown ability in the administration of the districts' business.

Mr. and Mrs. Bryan Pagen entertained Mr. and Mrs. Jerry Hooper and son of Sausalito on Sunday.

A card party will be held Monday evening in the Foster hall by Redwood Circle No. 100 of Druids. The chairman of the committee in charge is Mrs. E. Pelegrini.

nite projected right-of-way between the highway and San Francisco bay. "The question at issue," said Durbrow, "is whether an incorporated railroad company, with no authority to build, shall be permitted to interfere with construction work by a railroad enjoying physical existence in territory the other line covets."

"Everything the Southern Pacific has done in this particular case," he retorted Judge Olney, "has been against public policy. It has sought to evade Interstate Commerce Commission rules framed to prevent occurrences which are not to be encouraged, but repressed."

SCHOOL PAPER WILL TRY FOR STATE HONORS

To Enter Contest At University of California

Eight Sequoia students will journey to the University of California Thursday, April 11, in order to represent the high school and enter the Sequoia Times in a contest and convention occurring at that college on Thursday and Friday, April 11 and 12.

The contest is sponsored by the journalistic fraternity, Kappa Delta Nu, and the visiting Sequoians will spend the night at fraternity and sorority houses on the campus. The eight students Wendell Peterson, Stanley Netherthor, Boyd Fairfield, Marietta Morrison, Norman Hollingsworth, Evelyn Roberts, Fred Blackington and Sam Blachman, will be accompanied by Miss Eunice Schmidt, adviser of the Times.

This is the contest, it will be remembered, in which the Sequoia Times won first place in unlimited competition last year, and consequently the members of the student body are looking forward to another good mark for the ensuing contest.

Prizes will be awarded for schools under 750, over 750 and for news stories, editorials, etc., thus offering considerable opportunity for winning at least one prize.

School Musicians To Give Concert

Both the Sequoia band and orchestra have been practicing hard during the past few weeks in order to present in good form the concert occurring Friday night, April 14. In addition to numbers being played by the band and the orchestra, there will be various soloists.

This is the second year in which such an attempt has been made, but Max Geiber, head of the instrumental department, feels that the students have improved considerably over last year.

A small charge of 25 cents will be asked so as to cover some incidental expenses incurred by the musical department.

Jury Finds Auto Death Accidental

An inquest was held yesterday in the parlors of Layne & Tinney of this city into the death on Wednesday of Fred Johnson, an employee of the Pacific Coast Steel Co. of South San Francisco. Johnson was injured more than a month ago when he was struck by a car driven by Pasquale Gavoeloff of 61 Sharon street, San Francisco, who is being held on a manslaughter charge.

The verdict rendered by the jury was "Death was due to concussion of the brain received when run down by an automobile—accidental."

Funeral Held For Mary Ann Aragon

Funeral services were held Tuesday at Mt. Carmel Catholic church for Miss Mary Ann Aragon, 17, of this city, who passed away Sunday at the Community hospital, following a long illness. Miss Aragon was the daughter of Mr. and Mrs. Enos Aragon of this city. In addition to her parents she is survived by two sisters and two brothers, Mrs. Annie Lopez, Mrs. Minnie Ruez, Richard and Frank Aragon. The funeral was under the direction of the Layne & Tinney Co. of this city and was followed by interment in Holy Cross cemetery in Menlo Park.

NEW LYRIC RADIOS IN FIRST SHOWING HERE

The Buckley Radio Service on Webster street this week received the first shipment of the new model Lyric radio. The new set contains a number of distinctive refinements which have attracted the attention of radio fans and Buckley reports a great interest expressed in the new set. The new model Lyric is now on display at the Webster street store.

Sidney Moore, one of the proprietors of the Nippa Hut on El Camino Real, returned this week from a vacation spent with his parents at Monrovia.

COUNTY REALTY MEN GREET PRESIDENT OF REAL ESTATE BOARDS

Harry C. Culver On Visit Here Gives Talk On Realty Business and Also Aviation

Need for elimination of obsolete provisions in the laws governing real estate transfer was emphasized by Harry C. Culver of Culver City and Los Angeles, president of the National Association of Real Estate Boards, in an address delivered before the Redwood City District Real Estate Board and neighborhood boards at Redwood City Wednesday evening at the Emerald Lake Club house.

Culver urged unified action of realtors and property owners in securing modernization of state laws which are unnecessarily cumbersome the sale of real estate and in bringing to public attention the need for equalization in state tax systems, so as to bring about a more nearly fair distribution of the tax burden as between tangible and intangible assets.

"A million dollars worth of bonds can be purchased in one hour," he said. "The transfer of automobiles consumes only a trifle more time, but the transfer of real property is surrounded by legal safeguards and technicalities, some of which are wise and necessary, but many of which are a heritage from the distant past and do not fit modern conditions."

"The instruments of finance used in real estate are in many states surrounded by legal limitations which retard the free flow of money and prevent adjustment of the relationship between buyer and lender on a business-like basis governed by economic considerations. The result is that certain types of real estate financing are unnecessarily difficult to obtain and are costly. It is important that we study this problem, and that we find a better solution than now exists."

Culver, who is using his private Stinson-Detroler in making a year's circuit of visits to member boards of the association, touched on the part which he believes aviation is coming to have in affecting present day utilization of real estate.

"Railroads are buying additional yardage for aircraft," he pointed out. "Manufacturers of light articles are moving to airports. Homes adjoining airports are giving way to hotels, apartments and restaurants. Executive offices are being erected on the fields."

"As the automobile extended metropolitan areas, so that villages thirty miles from our city centers became parts of that city, so will the airplane shift and expand realty holdings in all directions."

Culver was greeted by realtors from throughout the bay district. The clubhouse of the Emerald Lake Club was filled to capacity. William J. Dussel, as president of the Redwood City Realty Board, presided at the meeting and introduced the guests of honor, including President Culver; Lieutenant James Dickerson, national vice-president of the organization, and Dave L. Walter of this city, who is district vice-president. Dussel then introduced Charles Holt of Leonard & Holt, who acted as toastmaster.

In addition to the speaker of the evening, a number of other interesting and instructive talks were given, and an elaborate program of entertainment enjoyed.

WOODSIDE

Dr. and Mrs. Herbert Allen entertained sixty children on Sunday afternoon at an Easter egg hunt. The contest took place at the Jackling place and was won by Carl Shine, who was closely pressed for first place by Peter Gallagher.

The Allens will leave on the 15th to meet Mr. and Mrs. Jackling and Dr. and Mrs. Moffitt in England, whence they will start their voyage around the world in Jackling's yacht.

The united Easter Sunrise Service was held in the Canyada hills on Sunday morning. Over 1000 people arrived in time to greet the rising sun from this vantage point. The morning was beautifully clear and the religious services very impressive.

At the election for school trustee held last Friday O. E. Blackington, incumbent, was unanimously returned to office, a testimonial to the high regard in which he is held by the community.

At the contested election for fire commissioner held on Monday E. L. Beck was the successful candidate.

The regular meeting of the Parent-Teacher Association was held on Thursday at which the nominating committee reported its selection for officers for the ensuing year. A card party will be given by the association on Friday evening at the club rooms and will be in charge of Mr. and Mrs. George Givens.

Mr. and Mrs. Edgar Harrison of San Francisco were guests of Mr. and Mrs. Nels Andreen over Easter.

Mr. and Mrs. Frank Huddart and Mr. and Mrs. Newhall of Berkeley were Easter guests of James Huddart.

Mr. and Mrs. Ettore Avenall and family have returned to their home here for the summer.

MAN HURT IN AUTO WRECK

James Hansen Now In Serious Condition From Injury

James Hansen, local building contractor, is at the Community hospital in a critical condition as the result of an automobile accident, which occurred Wednesday evening. The accident occurred at the intersection of Jefferson avenue and Iris street. Hansen, according to the report of the officer who investigated the case, was driving south-east on Iris street. At the same time Addison Hall of 7th avenue was driving northwest on Jefferson avenue. The two cars collided at the intersection of the two streets, Hansen's car striking the left hand rear corner of the Hall machine.

The Hall car was not seriously damaged, but Hansen's car was a complete wreck, and the driver was rendered unconscious by the injuries which he received.

He was taken to the Community hospital after first aid treatment had been rendered, and up to a late hour yesterday was still in an unconscious condition.

Sequoians to Meet Lowell Swimmers

Because of the fact that the swimming meet with San Jose was postponed for another date, the Sequoia paddlers will meet Lowell high school of San Francisco today in place of the Southerners.

Occurring in Sutor Baths, the meet will be the first meet complete in that competitors from all four classes of competition will swim. There will be four teams; 10's, 20's, 30's and unlimiteds, to swim against the city school, and the resulting score will thus aid materially in establishing some estimate as to the ability of the team as a whole.

Coach Jim Eves, now coaching his third Sequoia swimming team, since swimming has become a major sport at Sequoia, is of the opinion that a tight score should be the result, and it will be remembered that the first meet of last year in which the Cherokees made a creditable showing was the one held against Lowell high.

Former Local Man Killed in Samatra

News of the untimely death in New Guinea of Captain Richard Connell, former resident of this city, and brother-in-law of Mrs. Daniel Stafford, was received here this week. Mr. and Mrs. Connell formerly made their home on Birch street.

Captain Connell was one of the best-known shipping men of this coast, and when the concrete ship Faith was constructed here during the war he was engaged to take her to sea on her maiden trip. Captain Connell fell from a gang plank and was killed while boarding a ship in Samatra.

Exchangites Hear of History of Style

Styles and their place in history was the topic of an interesting address given before members of the Redwood City Exchange Club Tuesday evening by Marshall Hale, Jr., of San Francisco. The speaker is one of the foremost style experts of America and has studied under the leaders of the world and brought a rich fund of knowledge to his talk.

The chairman of the meeting was Roy Bissel. An interesting feature of the meeting was a number of accordion selections by Secondo Penna of this city.

At this meeting the Exchange went on record as heartily endorsing the Harbor Bond Issue, as it did at a previous meeting give its endorsement to the proposed charter form of government for Redwood City. Both of these projects will be voted upon by the people of this city next Tuesday.

Kiwanians Hear How Phone Call Is Transacted

Members of the Redwood City Kiwanis Club were given a practical demonstration of the telephone Wednesday at the regular meeting of the club. The program was prepared by L. C. Brown, who with the aid of Bert Smith, wire chief and Miss Sarah Ward, chief operator of the local exchange, demonstrated the various operations necessary for the completion of a telephone call. The demonstration was made by means of models and various pieces of telephone apparatus.

LOCAL WOMAN IN DIVORCE ACTION

Suit for divorce was begun in the Superior court here this week by Elizabeth Hermosillo from her husband, Stacio Hermosillo, on the grounds of extreme cruelty. Mrs. Hermosillo claims as her own property a house and lot in Redwood City, valued at \$3000 with 400 worth of furniture, a tamale parlor from which there is a monthly income of 300 and a radio valued at \$100. Community property is listed as a vacant lot valued at \$3000 on which there is \$1200 owing.

College Club To Appear Here In Musical Numbers

Appearing on the stage at the Sequoia Theatre, Sunday, April 7, will be the Brick-Morse California Collegians. This act is composed of twenty lads from the University of California, under the direction of the veteran Brick-Morse, formerly director of the University of California Glee Club. The Collegians are an outgrowth of the former Glee Club, and since their organization about three years ago have made successful summer tours to the Orient, to Europe, and through the Northwest, Canada and Alaska.

The act which they will present here consists of a male chorus of twenty voices, a ten-piece band and a variety of specialty acts by various members of the troupe. There is comedy, dancing, and a variety of vocal and instrumental solos, both classical and popular. The whole act is presented with all the collegiate pep and enthusiasm imaginable and the act is so varied that it is sure to please a wide variety of tastes.

He was taken to the Community hospital after first aid treatment had been rendered, and up to a late hour yesterday was still in an unconscious condition.

Final Reading By Mrs. Brown Monday Evening

Mrs. Hugh Brown of Palo Alto will on Monday evening give the last of a series of dramatic readings in Redwood City. On that evening she will read "Mr. Money Penny" by Channing Pollock. This will be in the girls' recreational room at the Sequoia Union High School. The regular admission of 75 cents will be charged.

On the following night Mrs. Brown will read "The Unknown Warrior" by Paul Raynal in the little theatre at Stanford. The public is invited to this performance.

Assessor Aids Passage of New Taxation Plan

Assessor D. P. Flynn returned yesterday from Sacramento, where he went in the interest of constitutional amendment No. 18 that passed the senate on Wednesday after a long debate. By the terms of this amendment taxes on automobiles would be collected by the state at the time the licenses are paid. The tax would be prorated to the counties. Should this amendment become a law over \$3,000,000 would be received by the state which is lost now owing to the system of taxation. Mr. Flynn is a member of the legislative committee of the State Assessors' Association.

ODD FELLOWS PLANNING DANCE ON APRIL 13TH

The Booster Committee of Bay View Lodge Odd Fellows will hold a dance in the Odd Fellows hall on Saturday evening April 13. The usual music will be provided. Admission will be 50 cents.

THE BOOSTER COMMITTEE OF BAY VIEW LODGE ODD FELLOWS WILL HOLD A DANCE IN THE ODD FELLOWS HALL ON SATURDAY EVENING APRIL 13. THE USUAL MUSIC WILL BE PROVIDED. ADMISSION WILL BE 50 CENTS.

THE "TOBACCO BRIDES"

THE Virginia Company advanced the passage money of the young women who came over to marry and help the early settlers establish homes.

As each bridegroom was required to pay to the company "120 pounds of the best leaf tobacco" for his bride's passage, the young ladies were referred to as the "tobacco brides."

Although tobacco is no longer used as currency, much money still "goes up in smoke" if it is not deposited quickly in a bank account.

We invite you to establish one here.

CALIFORNIA NEWS BRIEFS

The Right Rev. Robert J. Armstrong, formerly of Yakima, Wash., was inducted as bishop of the Sacramento diocese.

W. J. Clark, Berkeley hotel man, has taken a ten year lease on a two story hotel soon to be constructed at Wasconville. The hotel, which will cost approximately \$60,000, is being built by Louis Gross, local furniture dealer.

The Placer County Chamber of Commerce has arranged to have a madrona tree which grows in a large cedar stump above Forest Hill removed and planted at the state fair grounds at Sacramento.

The number of telephones in Willows increased by forty during 1928. This is the report recently issued by Herman Krauch, local manager for the Northern California Telephone Company. There are now 1,113 telephones in the Willows district.

Palos Verdes Water Company has applied to the Railroad Commission for authority to issue and sell 1500 shares of its common capital stock at \$100 per share for the purpose of paying indebtedness incurred in the extension of its water system, serving Palos Verdes Estates, Los Angeles county.

Don Gaspar de Portola is to be lifted from obscurity. His monument, now in an inconspicuous spot in Watsonville, will be moved to the city park plaza, where the proud Don, in conquering pose, may be seen more readily by visitors. Portola, with his army of Spanish explorers, crossed the Pajaro River at Watsonville on his historic expedition to California.

Widespread support has recently been given to the High Sierra Recreation Association, formed for the purpose of exploiting the area on the eastern slope of the Sierra in Inyo and Mono counties. The head office of the association is at Bishop, with branches at Bridgeport, Big Pine, Independence, Lone Pine and Los Angeles.

"Sulfide nets" will be strung fifteen feet below the Colorado street bridge spanning Arroyo Seco in Pasadena, if Chief of Police C. H. Kelly's plan is approved by the city manager. The city engineering department was asked to estimate the cost of suspending nets under the bridge to prevent death to persons jumping from the structure, which stands 144 feet above the bottom of the arroyo.

The board of supervisors appointed George Houx, well known Colusa rice grower, as sheriff to fill the unexpired term of the late Claude D. Stanton, who died at the steering wheel of his automobile in Martinez recently. Houx took up his duties immediately after appointment. Nine other persons were considered by the board for the appointment.

Henry Mead Bland, head of the English department at the San Jose State Teachers' College and widely known California poet, was given the title of "the laurel-crowned poet of California" by the Assembly, with passage of a resolution, voted almost unanimously over peremptory protests based upon the fitness of the proceeding. Dr. Bland is the author of "The Ultimate California" and other poems.

Permission to build a harbor and clubhouse on tide lands near the Southern Pacific mole in Alameda, was granted to Alameda Airport, Inc., by the Alameda city council. The harbor will be for use of hydroplanes, speed boats and other water crafts, according to V. G. Skinner, secretary of the airport company, which has under lease 346 acres of city owned land where the improvements will be made.

Ontario must immediately improve approximately twenty miles of sidewalk at an estimated cost of \$70,000, if it does not want to risk losing its free mail delivery service. This warning was issued to the city council by the superintendent of mails at the local post office. The streets also must be properly lighted, and houses must be so numbered that the numerals may be read easily from the street.

The postal department regulations demand all these things, otherwise the delivery service will be discontinued. The value of timber cut from the national forests of California district (California and southwestern Nevada) amounted to \$1,037,638 in the calendar year 1928, according to T. D. Woodbury, assistant district forester in charge of the office of forest management in the United States Forest Service headquarters at San Francisco. This total is a 15 per cent increase over the 1927 receipts, and is the first time that the revenue from timber sales in the national forests of California has exceeded one million dollars. The total cut of national forest timber amounted to 333 million feet. Of the total receipts from timber sales approximately \$130,000 was applied in the exchange of private lands within the national forests. Timber sold at cost of administration to farmers and settlers for use on their lands totaled \$1,114.

William Sherrill, 28, alias Sherrill de France, who underwent an operation in Los Angeles three years ago in an experiment which attracted national note, to cure him of a weakness for stealing automobiles, is in the toils of the law again for stealing an automobile.

Site for a new building for the Marysville-Yuba City telephone exchange has been selected by the Pacific Telephone and Telegraph Company on the south side of Sixth street, between E and F streets, directly in the rear of the newly completed executive office building of the P. G. & E.

The Sacramento Chamber of Commerce reports that the new seventy-ton mill of the Gaston Gold Mine will begin operations about May 1. James Thompson, former foreman of the Plymouth Consolidated, will be in charge. The major portion of the United States battle fleet is at anchor at San Pedro Bay where it will remain until April 8, when long range battle practice calls it to sea again. Five dreadnaughts, two airplane carriers and a host of other ships are in the harbor from a two months' cruise in the Panama Canal section. Other units of the fleet will arrive later.

James Thorp of Lockeford has been appointed a member of the county forestry board to serve with John W. Galway and Charles De Carl of Stockton. The forestry board has charge of the preservation of trees along the highways in the county and serve without pay.

Drainage and reforestation is being carried out preparatory to the resumption of operations at the Alta Mine in Amador county. High grade ore was encountered on the 300 level of the mine before the closing due to litigation several years ago, according to the Sacramento Chamber of Commerce.

President W. W. Campbell of the University of California has announced that Mrs. Warren R. Porter of Watsonville has established a scholarship for students attending the College of Agriculture at Davis. The scholarship pays \$120 per year and is to be awarded to students from the Watsonville High School.

The Fresno State College almost went out of business for a short time recently and the only reason that could be assigned was jury duty. One of the professors had expressed a desire to serve on a jury, and as a result a venire called for duty in the Superior Court contained the names of eleven members of the faculty. Their excuses were accepted.

Compensation to owners of the 523 acres on the eastern slope of Mount Tamalpais, desired by the State for park purposes, was fixed at \$100 an acre by Superior Judge McKensie. He decided on that figure after listening to testimony given in the suit brought by the State Park Commissioners against owners of the land, to fix the value. The State will pay approximately \$52,300 toward purchase of the land, leaving about \$33,000 to be raised by public subscription.

Ten days is the average length of the vacationing motor tour on which overnight stops are made at hotels and the average daily expenditure of each individual on such trips is \$7.50 according to figures reported to the California State Automobile Association. It is estimated that close to 32,000,000 motor tourists made such trips last season and that their expenditures ranged around a total of \$2,400,000,000.

Airports in the Eastbay will not be able to handle air business of that district five years from now, George Likie, manager of the Oakland office of the American Railway Express told members of the Exchange club meeting at Hotel Alameda recently. Aviation is growing daily, and it is impossible to forecast how great that growth will eventually be, for the industry is yet in its infancy. Aviation will aid rather than hurt the country's express business.

Orders calling for delivery in July of five heavy Mikado type locomotives have been placed with the American Locomotive Company by the Western Pacific Railroad Company. The new locomotives will be used in freight service on the main line between Portola and Elko. Each of the new locomotives will have a water tank capacity of 15,000 gallons, 5,000 gallons more than the normal for engines of this type. The increased water capacity will also speed up the time at stops for taking on water.

The city of Richmond plans a comprehensive program designed to attract new industries during the coming year, according to announcement by the chamber of commerce. Two outstanding projects having a bearing on this are the completion of dredging on the inner and outer harbors, and the cutting canal development project. Plans now being discussed call for completion at an early date of the dredging program on both water fronts, whereby new deep water will be created and new turning basins will be established that will help to attract more and larger vessels to Richmond harbor.

The Shipowners' Association and the Pacific American Steamship Association, operating a marine service bureau, are not doing so as a combination in restraint of interstate and foreign commerce. This was the decision of the United States Circuit Court of Appeal in affirming a decision of Federal Judge Frank H. Kerrigan. The action was brought originally by Cornelius Andersen on behalf of himself and others, contending that the defendants fixed wages, maintained a blacklist, discriminated between union and non-union men and compelled to take jobs designated and companies to employ men assigned to them.

The Yuba Pass Road is paved and in excellent condition from Auburn to Grass Valley and Nevada City, reports the Touring Bureau of the California State Automobile Association. This is a very attractive drive at this time of the year especially as the fruit orchards are in bloom along the way, and the wild flowers are beginning to come out. The road from Nevada City to Downsville is a good gravelled road the entire way. From Downsville to Sierra City the road is somewhat rough and chunky at the present time, and some snow is encountered. The road is open to a point five miles above Sierra City, but is closed beyond on account of snow.

In order that they may be able to provide for their homes plain and useful furniture wherever such furniture will fit in, the club women of Sutter county have gone to the study of carpentry. Under the direction of Miss Lillian D. Clark, assistant state leader of home demonstration agents.

Valuable new equipment, including an observation balloon, a Liberty motor, a Packard motor and a Hisco motor, the donation of the war department, is being prepared for use at Galt High School and Junior College. This gift is the second to be received from the war department.

Holders of shares in the old Julian Petroleum Corporation, which was driven into receivership by stock overvalues and spectacular manipulations nearly two years ago, will receive stock in the reorganized company on the basis of original cash investment shortly after April 15, next, it has been announced by officials of the company. It is planned that the transfer of the Julian properties and assets is taken over by the Sunset Pacific Oil Company, its successor, on April 15, and the present receivership be terminated.

POULTRY FACTS

CLEAN AND SPRAY TO CONTROL LICE

Preventive Measures Should Be Taken Before Summer.

Surveys, made by the poultry department of the North Carolina State college, show that more than 53 per cent of all poultry flocks in North Carolina are infested with either lice or mites.

"The pests multiply very quickly during the hot months and for that reason control measures should be taken before the summer sets in," says Dr. B. F. Kaupp, head of the department. "The henhouse should be given a thorough cleaning with a 4 per cent coal tar dip. All cracks and crevices should be sprayed and the perches painted with a pure dip or creosote. New scratch litter and nesting material should be put in before the hens are allowed to use the house. If these precautions are not taken, the sitting hen will be killed and the small chicks will weaken and die."

The adult fowl should be dusted with sodium fluoride. This should be used sparingly as there is some danger of injuring the skin. A pinch of the material should be held between the thumb and finger and worked among the feathers. This operation should be continued until the entire body has been covered, and should be repeated in five days if all the lice were not killed.

All brooder houses, henhouses or any place that the chickens roost should be gone over with the 4 per cent solution of coal tar and where possible the hens transferred to another house during the cleaning.

Doctor Kaupp recommends that new houses be built, especially where the old houses have been in use over a long period and are thoroughly infested with the pests. The old houses should then be torn down and burned, he says.

More Hopper Space for Feeding Fowls Is Urged

To enable all the hens to obtain plenty of laying mash it pays to allow ten feet of hopper feeding space to each 100 hens. A five-foot trough hopper open on both sides gives good satisfaction. These open hoppers built up on a little platform to keep out the straw litter are proving more popular than wall hoppers, and some poultrymen are tearing out their wall hoppers and installing the long open boxes. Then the mash does not clog and is plainly visible to the hens. If the wall hoppers remain they can be used as a reserve supply and mash taken from them and added to the open hoppers as the supply needs replenishment.

Eliminate Tuberculosis From Chicken Quarters

Fortunately with poultry the disease is not difficult to control. It should be remembered that the disease is confined to very old birds. Birds under a year old are seldom infected. By maintaining a flock in which the number of old birds has been kept at a low figure the danger of infection is reduced. If, however, the premises are badly infected the house and yards should be given a rest for two years. The house can be thoroughly cleaned and disinfected, and then be used, but to eliminate tuberculosis from the yards the resting of the yards is necessary. During the resting of the yards their cultivation is desirable.

Actions of Guineaes

A guinea will usually build her nest in the edge of a briar patch or under a clump of weeds, and while on the nest will cackle a soft and long cackle similar to the male bird, but not so loud. The male bird often stands near the nest and cackles while the hen is on the nest. When the hen gets a large nestful of eggs, she will get broody and go to sitting on them. If she is not broken up. When she goes to sitting she rises and flies from her nest when she comes off.

Direct Sunlight Best

Direct sunlight promotes health and egg production. Sunlight through ordinary window glass is ineffective. Only direct sunlight or sunlight which passes through special glass or glass substitutes, which will permit the ultra-violet rays to pass through, is beneficial. Direct sunlight or its equivalent aids in maintenance of health, reduces mortality, increases egg production and improves hatchability and quality of eggs, especially egg-shell texture.

Feeds for Poultry

For poultry feeding, the right kind of protein is generally obtained from milk, skim milk, buttermilk, whey, fresh meat, meat scraps, fish scraps, tankage, or alfalfa leaf meal feeds. Very little of it is found in the common farm feeds, and for this reason when home-grown grains are used, it is necessary to purchase small amounts of the high protein feeds to supplement the home-grown grains. Milk of any kind is the most popular protein feed for poultry.

Dirty Eggs Spoil

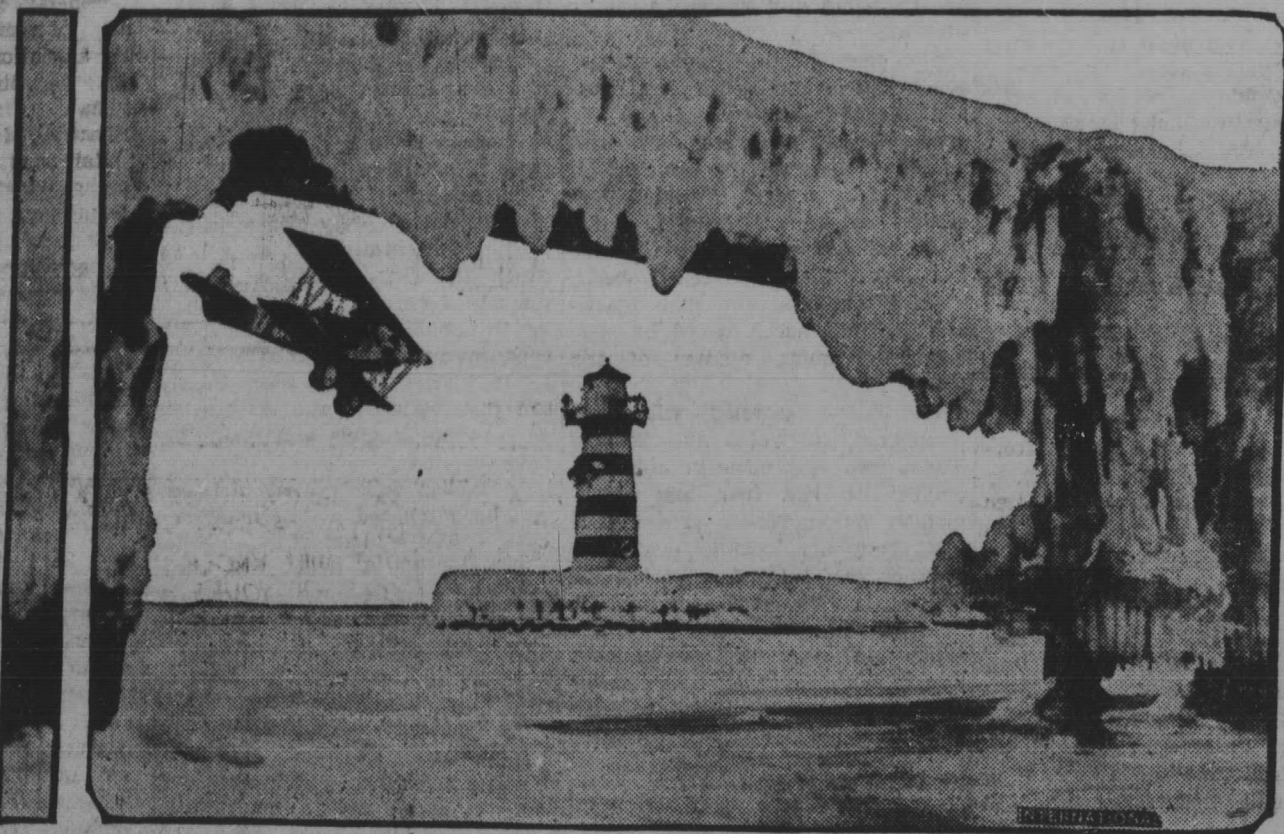

Washed eggs are suitable only for immediate consumption, and will not stand up under storage conditions any length of time. Although the washed egg may get by for a short time, it is quite acceptable on the fresh egg market, its inferiority is immediately evident after a period of storage. It is advisable by cleanliness and sanitation in the poultry plant to avoid the production of dirty eggs. Dirty eggs, when found, should be marketed as such.

Floods in Georgia Cause Big Damage

This air view of West Point, Georgia, shows the terrible destruction caused by the rising waters of the Chattahoochee river. Only the upper floors of the houses remain unroofed, while many of the smaller houses are completely inundated. Many have lost their lives and thousands are homeless.

Lighthouse Keepers Relieved by Airplane

Airplane sent by the German government arriving at Warnemunde lighthouse with succor for the keepers who had been in desperate plight due to the Arctic conditions which have affected nearly all Europe.

Heads Croix de Guerre Body

Admiral Guepratte and his wife as they arrived at New York for a tour with the Croix de Guerre delegation, which he heads. The association is a friendly order which includes Americans cited in France.

Mt. Lassen Breaks Loose

Mt. Lassen, in California, for many years inactive is again belching black smoke. Early one morning a white steam was seen rising from the crater and later this steam changed to a heavy black smoke which is hanging like a pall over the vicinity.

Business a National Menace

Is business a national menace? Perhaps not, but some practices which pass as business are absolutely opposed to all that we regard as civilization, as democratic Americanism or as Christian. The sight of business ignoring all the basic principals of all these institutions is too common to excite even astonishment.

It has been found necessary for the protection of the people from so-called business to establish such functions in the government as the railroad commission or the interstate commerce commission. Yet in spite of these safeguards, a company which desires to form a legitimate extension to its line to serve a new territory it finds itself opposed by the strong arm tactics which should have passed away with the rough and ready West.

"If the Southern Pacific is permitted to continue the work it started over a week-end, when the courts were closed, then we may as well go back to the days when railroads were forced to arm their construction crews," said Judge Warren Olney, Jr., representing the Western Pacific.

"We thought those days were over, but the Southern Pacific has shown an inclination to go back to them."

Cut-throat competition—gas wars staged by companies old enough to know better—selling below cost in order to reach a competitor and trusting to make enough on some later victim to recoup the losses—these things pass for business; perhaps they are business but they fall far short of the standards of which the American people of this age are capable.

Unfair competition is a menace. In a small town it is a silly, short sighted and usually disastrous course which eventually only results in the perpetrator being hoisted by his own petard. But applied to national and international concerns it becomes a subject for popular speculation. Unfair practices between railroads and between gas companies affect thousands, even millions of people.

It is a far cry from such competition to the doctrine of the brotherhood of man, or of the rights of a man to liberty on which this nation was founded. Adopt such standards for the nation and liberty would soon be for the strong only and brotherhood for the mighty.

Game Refuges Needed

By J. H. NEUSTADT

GROPPING for a policy and firing in the dark seems to be the result of efforts thus far attained in fish and game perpetuation. Every locality and frequently each sportsman hold different opinions as to procedure. All agree that conservation is right, but how best to conserve is the debatable question.

Start with ducks. Are there as many parents in their original habitat as ever, and do they fail to visit the parks where they used to be so thick that they obscured the sun, as the old timers tell us, on account of lack of feeding and resting places in fresh water, or has the quantity decreased on account of too many guns and laws to further reduce limits thereby urgent.

Travelers tell us millions visit Mexico, because the Mexican lacks the spirit of development inherent in the American, and hence the haunts of the duck are more nearly native and to its wants than here, where homesteading and reclamation have destroyed the territory previously visited in their migrations. Without further elaboration this question gives rise to hot debates. It is less killing, or it is more refuges and feeding places.

We have already so many protective laws a hunter needs to graduate from a legal university to know when he is within the law. Bag limits, no shooting from boats, prohibited transportation, closed periods, no live decoys, and others, until our codes are choked with restrictions. Increase of population accessibility by means of the automobile, the march of civilization all seem potent factors. The same questions apply to game and fish.

Predatory animals demand a heavy toll, commercial fishermen cover every attractive water, and a million guns and rods active. Little wonder there is a problem. Then again the sportsman condemning the predatory animals, the fur animal hunter condemning the sportsman, the laws limiting seasons, and the commercial canner seeking greater freedom. Truly the subject is worthy of a Solomon.

The San Mateo County Fish and Game Club is trying to solve these weighty problems.

A Check to Crime

THE rapid increase of crime in this country is an ever growing menace to society for which some remedy should be discovered. If unchecked, the ill effects of this menace will lead to an end which is not pleasant to contemplate. Even now the dockets of our courts are overburdened. Prisons and correctional institutions are taxed to the limits of their capacity. Statistics compiled in regard to the nation's homicide record by Frederick L. Hoffman, consulting statistician for the Prudential Insurance Co., show that of the 37,000,000 residents of 136 American cities the homicide death rate was 10.2 per cent per 100,000. In three cities the rate ran over 50 per 100,000. The estimated murder roll of the nation was about 12,000. This is but one phase of the criminal field. It gives an idea how deplorably high the percentage would be if all crimes were considered in compiling the statistics.

Another alarming aspect of the situation is that young men and women commit such a large portion of these crimes. Prof. George Washington Kirchwey, dean of the Columbian University School of Law and one of the foremost criminologists in the United States, in telling of his experience as a warden of Sing Sing Penitentiary, stated that he found 50 per cent of the men confined there during his year of study were under 25 years of age. Almost daily there are to be seen in the newspapers accounts of robberies and murders committed by young people yet in their teens.

In an attempt to curb the crime waves drastic laws have been passed. Heavy sentences have been imposed by the courts, and yet, these methods are seemingly of little avail. The number of murders, robberies, and other crimes of less serious nature continue to increase. Disrespect for law and order seems to grow more prevalent. Is there something fundamentally wrong with the system of society in which such conditions exist?

In his statements Professor Kirchwey said that 80 per cent of these criminals studied had never been trained to earn a living consistently. Perhaps this furnishes a key to the problem. Apparently, there is something lacking in the training received by the youth of this country. If they receive the proper training in the public schools, if they are furnished with an education that will aid them in earning an honest living, if their characters are properly developed will they turn towards a career of crime in later life? If not, then the responsibility of checking crime rests upon the public school system.

It is in the public schools that the future citizens of this country spend the majority of their time during the years when they are most susceptible to outside influence and environment. It is there that they should be taught those principles, imbued with those ideals of citizenship which will guide their acts later in public life, and enable them to contribute to public welfare rather than form a menace to its existence.

The responsibility upon the public schools cannot be properly discharged, unless these schools receive the whole-hearted support of every citizen. If they are to perform their mission, they must be given the important position in national affairs to which they are properly due.

An Electrical Age

THE people of the United States use as much electricity as all the rest of the world combined. We have almost five times the generating capacity of any other nation.

The amazing part of our electrical development is that it has been mainly accomplished in less than a generation. Since 1912 the population of the country has increased but 25 per cent yet generation of electricity has increased 615 per cent, the number of people living in electrically wired homes 470 per cent, and the number of customers receiving service 510 per cent.

In other words, electrical consumption has increased 20 times faster than the population. In the past seven years electricity has been extended for the first time to 9,000,000 new homes, the increase averaging well over a million homes yearly.

The result of this unprecedented development is seen in more efficient industry and in more comfortable homes with their labor saving devices. In 25 years electrification of urban America has been made almost complete.

Now the greatest remaining field is rural electrification. As swiftly as is possible the advantages of electricity that are enjoyed by city dwellers are being brought to the farms and the smallest villages. What has been accomplished for industry and the city home is being accomplished for agriculture and the farm home.

Approximately 85% of the ladies are regular readers of newspaper advertising.

"Why do you read the ads?" we ask. "We read them," they tell us "for information and suggestions."

Holding Up the Parade

A PALESTINE CRUISE

By REV. C. A. PARKER

On the evening of Feb. 7, 1928, the cruise party went aboard the Doric of the White Star Line. The party numbered, including members of the Cruise Staff, 468 persons, 304 of whom were women and girls, 164 men and boys, their individual age ranging from three years to eighty-four. A little after midnight of the 8th, we sailed from New York and anchored on the border of the harbor for the lifting of the fog and the coming of morning.

The Doric is one of the newer ships of the White Star Line, 600 feet long and steady going, with a speed of 18 knots an hour. Something of her size and speed will be realized when we are told that she uses 20 tons of coal a day. A walk around "B" deck, going far aft from the bow, gives one a stroll of nearly 1 1/4 of a mile. We occupied berths on five decks like a five-story hotel. The size of the ship will be understood when we are told that the distance from "A" deck, the uppermost deck, to the engine room is 100 feet. An elevator is used in getting to the engine room.

On the roof, or top of the ship, there is an open air playground or sun deck. Here one can loiter with comfort on sunny days. Walking aft from the bow on "A" deck we come first to the lounge room, 40x54, open to the light on three sides. Next on the port side is the children's play room. Next in order is the drawing room, where one may sit, or recline, and read, as a good library is here available; also material for writing. Next in order, on the opposite side of the ship is the gymnasium, well equipped. Then comes the smoking room and the veranda, where one can sit and watch the receding waves, or meander back and forth.

"B" deck is the favorite resort in calm sailing. Here is the spacious promenade, inviting to the attainment of health and pleasure; or if indisposed, the hospital is just at the rear. On this deck is located a barber shop, and some of the choicest state rooms are here.

"C" deck, amidships, is given up entirely to state rooms and baths. Forward and aft there are broad decks for games and recreation. The shuffle board, deck tennis and golf are much engaged in here when sea conditions will permit. The spacious dining hall is located on "D" deck, also a few state rooms. On "E" deck there are many state rooms and a large assembly room where all large meetings are held. We occupied this once a day with a large gathering, where Bible lectures were given. There is a sixth deck, "F", given up to state rooms but this was not occupied during our cruise as it was not needed to accommodate our somewhat limited party.

We are now, on the morning of the 8th, steering eastward into the great Atlantic after our first night of sleep on this "anchored palace of the sea."

It is the third Mediterranean cruise the "James Boring Travel Service" has made, and with an efficient staff of twelve to look after our every want we are care-free. Our bills for the entire cruise are all paid, as we supposed. The amount of the bills, on ship and land, ranged from \$680 to \$1575, depending upon the location of the stateroom. However, we soon learned that sundry "tips" were expected by those whose duty it is to serve us. Some tipped lavishly and were obliged to send home for more cash; some counted the cost and gave very modestly.

Our first day of sailing was through the rain and over a choppy sea. Here sea-sickness began with a considerable number. Those who were natural sailors, eating three stout meals a day, began to learn names and enter friendships of real worth. It is interesting to note that more than 30 states were represented in the passenger list, from northern Maine to southern California; from Minnesota to Texas. There were also thirty-five from Canada, and from as divergent points as Vancouver, B. C., and St. John, N. B.

After eight days of sailing we reach Madeira. Of the eight days there, only one could be called pleasant. Clouds and wind and a rough sea was our usual diet. We were surely glad when, on the morning of February 16th, we cast anchor before the beautiful little town of Funchal, Madeira. Madeira is the largest of a group of five islands belonging to Portugal, 37 miles long and 14 miles broad. It is one of the beauty spots of the world "a neglected paradise." Both scenery and climate are unsurpassed. Funchal is the main city of the island, with a population of 24,687 people, largely illiterate. It is said that of more than 1-8 of the children are enrolled in the primary schools on the island.

On that bright morning when we sailed into the charming bay lying before Funchal, beholding sea and valley and mountain grandeur, we felt well paid for the agony of the preceding eight days of sea-life. She sits in an amphitheatre of lofty hills, the precipitous coast line, the lofty jagged mountains make this the most beautiful spectacle in the wide world.

Our stay here was from morning till evening and it was a busy day for us. First was a tour of the town, over streets paved with small round stones set in colors in artistic design. We were shown through an ancient cathedral, a strange market where we were urged to buy fish of a new and strange pattern, past an old building bearing a tablet indicating that it was once the home of Columbus.

But the most exciting of our day's experience was the trip up to the mountain top of Terreiro da Lucta by a cog-wheel railway. Here a

charming view was had of the town and the bay 3000 feet below. On the return, some who were venturesome, chose the toboggan that bore them down the steep mountain side, through a winding sluice road paved with cobble stones, a distance of 4 1/2 miles. Two men, holding ropes, controlled the sledge though exciting, it was safe, and well worth the venture.

After visiting other places of interest, as the sun was getting low, we were taken back to the waiting ship by tenders, amid dashing waves. Here before sailing, we were introduced to exhibits of skilled diving; young lads in their boats, flocked around the ship's side; bidding for a chance to dive for coins which the passengers might throw into the water. And they always came up with the coin; some times with it between their toes. They are a bit fussy about their diving; they will not go down for common metal. It must be nothing less than silver.

We are again sailing with the feeling that the continuous and prosaic sea life is at an end, for in one day and two nights we again make port; this time at the famous Gibraltar. The morning was not far gone when we came under the shadow of that great rock. We reached here Saturday a. m., Feb. 18, and remained until 1 a. m. of Tuesday.

At our next writing we will speak of what we saw here and other points along the southern coast of the Mediterranean.

Graham-Paige Makes New High Production Record

This year's production of Graham-Paige motor cars reached a total of 21,880 cars on March 20, equalling the entire year's production of the factory in 1927, before the Graham-

Paige was presented by the Graham brothers.
Last year, when the factory attained, on May 2, the total of the previous year, it was regarded as a remarkable achievement of the management. This year, the total has been reached just 40 days earlier.

FROM NINTH TO FOURTH PLACE IN SIX MONTHS!

"400" Standard Six Sedan
\$1145.00
DELIVERED FULLY EQUIPPED

Most People Expect "400" Prices to be Higher than they Actually are.

PEOPLE who have formed their price-impression of the Nash "400" from seeing this striking new car, and from the enthusiastic comment of "400" owners, are very apt to price it higher than it really is.
"400" prices are a big "400" feature. The Standard Six "400" Sedan, illustrated above, is an excellent example of the new value Nash now offers.
Here are some of its notable features—features of highest quality which you are not accustomed to expect in a car at its price:
A very powerful, high-turbulence, high-compression, completely pressure-lubricated motor, with 7 bearings.
A lengthened wheelbase, new double-drop, tubular-trussed frame, alloy steel springs, and 4 Lovejoy hydraulic shock absorbers, for unsurpassed riding ease.
And complete equipment—full-sized cowl lamps, gasoline gauge and motor on instrument board, bumpers front and rear, spare tire and lock, shock absorbers, freight and handling charges—all included in the delivered price quoted above—nothing more to buy!

The New **NASH '400'**
Leads the World in Motor Car Value

IMPORTANT "400" FEATURES—NO OTHER CAR HAS THEM ALL			
High compression motor	Aluminum alloy pistons (linear strain)	7-bearing crankshaft	One-piece Saloon fenders
High Turbulence	New double drop frame	Exterior metalware chrome plated over nickel	Clear vision front pillar posts
Lovejoy shock absorbers (exclusive Nash mounting)	Torsional vibration damper	Short turning radius	Nash Special Design front and rear bumpers
Saloon Bodies	World's easiest steering	Longer wheelbase

Songs of Plain Folks

By James Lewis Hays

The City
I'd always heard them calling,
Giant cities, like a dream,
With their noble buildings reaching
To the skies—like stars—gleam.
So at last I saw the cities,
East and West, from coast to coast,
And I like their life and beauty;
I could live in them—almost.
But in every ringing city
There was something that I missed.
The friendliness—you miss it
Where streams of people twist
Through crowded, noisy places—
You miss it in their eyes.
I came back to friendly places,
Back to friendly country skies.
The country smiles a little
Even as the dustiest day,
And country folk reflect it
When they meet at work or play.
The city's worth a visit,
Worth exploring for a while,
But I'm living in the country,
Where the hills and valleys smile.

MOTORISTS TO BE AIDED BY STATE POSTS

Checking Stations To
Furnish Informa-
tion to Visitors

Anticipating a record-breaking influx of out-of-state visitors to California during the coming tourist season, Governor C. C. Young this week instructed Frank G. Snook, chief of the division of motor vehicles, to have all border checking stations reopened by May 1st.

Governor Young is so pleased with the service given visiting motorists by these stations last year that he believes they should become a permanent feature of the division's work, serving in a measure to provide the state's official welcome to the visitors.

"Let courtesy be your watchword," such was Young's instruction to the motor vehicle authorities. Special emphasis was placed on the advertising value of giving out-of-state motorists a favorable first impression of California.

"The real purpose of the border checking station should not be to harass visitors with detail and 'red tape' but rather to provide them with vital information about California's motoring laws," said Governor Young.

The stations are located at Yuma, Daguerre and Blythe in the south and Lake and Myers in the north. These points are located strategically with reference to out-of-state travel being on the main arteries leading into the state.

Snook announced that crews of at least three men each would be maintained at each of the stations during the tourist season.

These men will be given special training in handling tourist travel and giving the desirable information.

Visitors permits will be issued at each station entitling the visitor to remain in the state six months without securing a California license. Maps of all roads in the state will be kept on hand to give

BIG BLAST TO REMOVE SIDE OF MOUNTAIN

35 Tons of Dynamite
Will Be Used In
P.G.&E. Project

Moving the side of a granite mountain in the upper stretches of the Mokelumne river is on the program of Pacific Gas and Electric Company engineers for the early part of April, as one of the steps in the construction of the Salt Springs dam, the basic unit of the company's \$25,000,000 Mokelumne river hydro-electric development. Crews are now busy day and night drilling the necessary holes for firing a "shot" of approximately 35 tons of dynamite, which will blast away a section of the cliff about 1000 feet long, 120 feet high and 45 feet thick. By the force of the explosion this whole granite mass will be "kicked out" from the mountain for a distance of at least 25 feet. The "shot" will loosen up about 150,000 cubic yards of rock to be used in building the dam.

For the blast 45 perpendicular shafts 6 inches in diameter are being drilled to an average depth of 125 feet and at the level of the bottom of these will be a similar number of horizontal holes 3 inches in diameter. All will be packed with dynamite. The entire charge will then be touched off electrically.

The Salt Springs structure, situated 60 miles east of Jackson, will be the greatest rock-filled dam in the world, containing approximately 3,000,000 cubic yards of granite, the cubic content of Cheops, Egypt's

the motorist road information service.

No literature of any kind except official state bulletins will be distributed at the stations.

Records of the division show 176,046 out of state cars were checked through the border stations during the tourist season last year. Of these 81,785 came through the Yuma station, 55,452 through the Daguerre station and 26,982 through the Dunsmuir station.

largest pyramid. It will be 328 feet high, 1500 feet long at the crest and 800 feet through at the base.

Although completion of the project has been set for the middle of 1931, the dam already has taken definite form. A concrete cut-off wall, 250 feet long, 15 feet deep and 6 feet thick has been built into bedrock at the base of the structure, 40 feet below the river bed, to prevent seepage. This cut-off wall will be continued up each end of the dam, tying it into the granite cliffs on both the Calaveras and Amador sides of the canyon.

The upstream surface of the dam will have a water-tight facing of concrete, graduating in thickness from three feet at the bottom to a foot and a half at the crest, and based on a layer of derrick placed granite 15 feet thick. The structure will form a reservoir six miles long and with a capacity of 130,000 acre feet.

Another completed unit is a 1200 foot tunnel, 19 feet in diameter, through which the river is diverted during construction operations, but which, on completion of the project, will feed into a power house at the downstream base of the dam.

Sharing in the development of \$3,500 horsepower of electricity at this plant will be water carried through a two and a half mile tunnel and 4500 feet of pipeline from a reservoir on Bear River, north of the Mokelumne. Water entering the power house from the reservoir back of the Salt Springs dam will drop about 300 feet, while the water from the Bear river reservoir will drop from the mountain top through steel pipe approximately 2000 feet. From this generating unit the water will flow through 20 miles of concrete canal to Tiger Creek, where it will again be dropped down 1200 feet into a power house with a capacity of 80,000 horsepower. Then through another 22 miles of canal to augment the output of the Electric plant, 11 miles east of Jackson, after which it will return to the regular course of the Mokelumne.

Ice Proves of Value In Prevention of Spread of Disease

This is one of the worst months of the year for illness, according to Dr. Martha Manning, home refrigeration expert.

"On all sides there are cold, grippes, influenza—and all of these are spread by bacteria," Dr. Manning explains. "That is why it is especially important now to protect milk and other foods from the open air with its dust, soot and other impurities."

"Various makeshifts, such as window boxes and open-air coolers are worse than useless—they are actually dangerous. They expose the food not only to these impurities, but also to sudden changes of temperature, which encourages spoilage and the growth of bacteria."

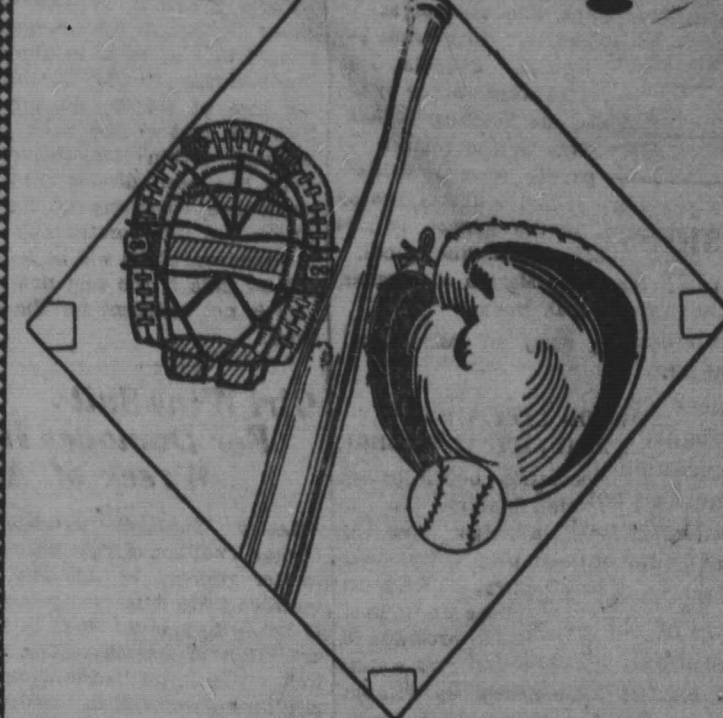

"There is just one sure, economical way to safeguard foods. Keep them pure and wholesome in a good, well-iced refrigerator. The few cents a day that ice costs is paid back many times over in food saved and doctors' bill prevented. If you are not taking ice now, it will pay you to start today and take it regularly."

"But refrigeration can be no better than the refrigerator itself. A good ice box is a good investment, whether there are children in the family or not. It quickly pays its cost in the food spoilage it prevents. And it pays further dividends by giving better tasting meals for years to come."

"Not only does the refrigerator safeguard foods against exposure to disease germs, but ice-freshened foods build up the system in strength to resist colds and other ills. Crisp salads, fresh vegetables and fruits not only keep the weight at normal, but they, rich in vitamins and mineral salts, build up vitality, prevent constipation and clear the complexion. They are the modern spring

tonics, supplanting the sulphur and molasses of the horse-and-buggy days. "Food orange and grapefruit juices help greatly to prevent 'flu' and to speed relief. Sufferers do well to stay in bed and drink lots of cold liquids. The well-iced refrigerator is an efficient nurse in times of illness."

Pioneer of Coast Dies in Pescadero

Funeral services were held yesterday in Pescadero for David S. Jackson, 84, coastside pioneer and Civil War veteran. Jackson died at his ranch near Harrison on Monday. He had been in ill health for some time, but his death was sudden and unexpected.

Jackson has been a resident of this county since 1868, having lived on his coastside ranch during all of that time. He is survived by four daughters and four sons. Of these two sons and a daughter have been making their home with the father on his Pescadero ranch. Mrs. Jackson died about 19 years ago.

STROPPING IS ESSENTIAL TO THE PERFECT SHAVE

the new
Million Dollar
Razor

is a nationwide SENSATION

Absolutely proves that stropping is essential to a perfect shave

THE new Valet AutoStrop Razor was introduced last May. It created a sensation. Small wonder, since it proved a vital fundamental of successful shaving.

Its automatic self-stropping feature demonstrated that all barbers are right—have been for 2,000 years. Because they always strop their razors before they start a shave.

The reason for this is that after the first shave the cutting edge of the finest blade that can be made is a row of minute needle points until it is properly stropped. This smooths out and re-aligns these tiny jagged hooks.

Everywhere wise men are turning to the new Valet AutoStrop Razor because it is the only razor that sharpens itself and assures you of a super-keen smooth shaving blade.

What's more, 21 years of research and a million dollars have been spent in improving the new Valet AutoStrop Razor.

Not only the razor itself but the blades have been materially bettered. A new type guard enables you to use the full shaving edge of these keener blades. You insert or remove them instantly by pressing a button. Blades are locked in a firm, non-flexible grip that eliminates vibration and pull. No need to remove the blade to strop and clean it.

Try the new Valet AutoStrop Razor. Give it a fair test. You'll soon be fast friends with it.

You'll enjoy the most perfect and fastest shaves you ever knew. And you'll hold up your hand and say "Never Again!" to the use of an unstropped blade.

Also...
a New and Finer
Shaving Cream

Winners Named In Harbor Essay

The three prize winners in the essay contest conducted by the Redwood City Chamber of Commerce in the interest of the municipal harbor bonds to be voted on next Tuesday, were announced yesterday by E. B. Hinman, secretary-manager of the chamber. First prize, \$25, was awarded to Mrs. M. Grace Carl of 173 Elwood street; second prize, \$15, to Sam Blackman, Box 163, Menlo Park, and student at Sequoia high school, and third prize, \$10, to Dorothy Gensen, Sequoia high school. The prizes were offered by the city council and the Chamber of Commerce had charge of the contest. A great many papers were submitted, Sequoia high school students taking great interest in the contest, two of the winners being from this school. The judges were Merton F. Hughes, John Gill and J. D. Hedge. The winning essay by Mrs. Carl follows:

WHY REDWOOD CITY SHOULD ACQUIRE A MUNICIPAL HARBOR

Water transportation began before the dawn of human history. To "go down to the sea in ships" was the pride of the earliest people that have left us a written story. The great cities of history were those whose people were able to bring the products of distant lands to their gates by water. Where cities have grown up without regard to future transportation needs, vast sums have been spent to dig canals and dredge harbors.

Redwood City began as a water port and the early development was due to this advantage in carrying products to market. This natural harbor was lost in later years and so the city was isolated from the commerce of the world while others who developed shipping facilities by water surpassed us in population and in industry. It is to get back this lost heritage and take a place in shipping and industry that this city proposes to secure land on the water front and create a municipal harbor.

Having a deep water channel with approach through the creek almost to the city line is useless unless effort is put forth to utilize it. If all the fleets of the world were sailing along this channel it would avail nothing unless a place were provided where they could land and load or unload cargoes. Boats of climate and beautiful residential areas are vain unless some activities are provided to give employment to those who would come and enjoy these surroundings. Ambition to compete in the race for commerce and industry can only be realized by a show of faith from the community itself by investing in a project which will provide one of the primary requirements to investors of manufacturing enterprises.

The maintenance of waterways is a particular responsibility of the Federal Government. The present policy of the Federal authorities is to extend assistance of this kind only where records show that sufficient commerce has been developed to justify the expense. It is also the policy of the government to cooperate with municipalities or districts and not private enterprises in harbor development.

The city that exemplifies faith in the future by acquiring an interest in a harbor and providing the means by which water borne commerce may be accommodated will find the government willing to bear fifty percent of the cost of maintaining the channel.

The Interstate Commerce Commission whose business it is to fix the rates at which freight shall be hauled, recognizes that where carriers compete with water transportation lower rates must prevail. Hence the doctrine of terminal rates which are enjoyed by cities so situated that they may receive their materials and merchandise by water. This privilege of terminal rates is highly prized and may be enjoyed by Redwood City when adequate requirements are furnished to water commerce by providing facilities for landing boats and handling freight.

While meeting the needs of commerce and industry is the most compelling reason for Redwood City to acquire a harbor, there are other desirable uses to which such property could be put.

Roads, railways and car lines are built to make cities more easily accessible to those who desire to visit them. On a body of water like San Francisco Bay there are many who enjoy boating by motor or by sail. These are usually people of means and leisure and are highly desirable as visitors or as permanent residents. For a small expenditure adequate provision can be made to take care of such traffic. Thus the doors of this city would be opened to a large class of visitors who would enter and leave in small boats through a harbor especially equipped to care for their needs.

Why should Redwood City acquire a municipal harbor? Why should any city do it? Because cities have found that by providing public wharves for shipping and pleasure boats they profit handsomely from the revenue that it brings in. The harbors of the world are big money making institutions and assure their cities rapid development which would not come to them had they no port. It would close their doors to commerce that must come in by ships.

Nature has given Redwood City waterways at the hands edge to attract the commerce of the world to her doors. It is time therefore for Redwood City to open her gates to the profits and pleasures that the use of this heritage will bring.

Middlefield Road Widening Planned

The board of supervisors of this county on Monday accepted plans and specifications for widening of the Middlefield road from Redwood City to the southern boundary of the county. The proposed widening is to consist of the construction of two foot concrete shoulders on each side of the road, the surfacing of the road with asphaltic concrete and the construction of crushed rock shoulders on each side.

Plans prepared by County Engineer George A. Kneese were considered and accepted by the board. There is now available for this work the sum of \$50,000. In the event that the cost of the work cannot be kept within this amount, the work has been divided into three units, one consisting of the road within the incorporated city limits of Atherton, which will be left until a later date if the sum now available is not sufficient for the entire work.

Girl Wins Suit For Damages In Wreck of Auto

Lealey Tudhope, daughter of George Tudhope of Palo Alto, and a former resident of this city, was awarded \$2750 damages against Earl L. Drals, former salesman of Leonard Holt of this city. The award was for injuries received by the girl in an automobile accident at San Carlos on November 18, 1928.

Roselli Donald C. Brooks, et al. vs Jules Harris, et al. Trial to be re set.

Telephone Typewriter Apparatus Used in Many Lines of Business

Scope of This Method of Communication Includes a Variety of Applications Which is Constantly Increasing

THE increasing tempo of modern business, operating over constantly widening areas, has created an unprecedented demand for means of communication that will provide the close contact necessary between the scattered units of a commercial or industrial organization. Whether they are across the street from each other or across a continent, the various units of a modern business enterprise require a medium of communication that will permit a degree of coordination approaching that of an organization housed in a single building.

To meet this demand the telephone typewriter has been adapted to business uses. This device has for many years been the principal channel of the Press for collecting and distributing the nation's news stories.

The telephone typewriter is a device which typewrites by wire, combining the features of two major accessories of modern business—the telephone and the typewriter. It is similar to the ordinary typewriter and any typist can operate it. It prints either on a page of standard size or on a narrow tape, and has a high speed capacity of about 80 words a minute.

Remarkable Growth Shown
In the brief period since its adoption by business, telephone typewriter service has had a remarkable growth. While the nation-wide networks used by the Press are still the largest in operation, a total of approximately 80,000 miles of Bell System wire now provides service for business enterprises of all kinds. The growth in this new field is indicated by the fact that in the past year new services installed have added roughly 47,000 miles of wire.

Among the most important users of telephone typewriter service are the financial institutions. Nearly 8,000 miles of wire are used by banks, while brokerage houses require more than 10,000 miles. One of the brokerage firms maintains a network linking offices in nineteen cities scattered from coast to coast and from Canada to the Gulf of Mexico.

With keen competition in the banking field and with the public

transferring their savings from the corner cupboard to securities of all kinds, the business of these companies keeps the wires loaded to capacity.

Useful to Manufacturers—
One of the first manufacturing groups to adopt the telephone typewriter as a major communication channel was the textile industry. With mills located at points that were generally remote from the principal markets, these companies required a communication system of large capacity. In all, this group now employs circuits totalling approximately 5,000 miles in length. These link general and sales offices in New York or elsewhere with mills in New England or the South.

Manufacturers of metal products of all kinds have also taken up the telephone typewriter. The principal factor here has been the need for a communication service that would facilitate unified control of separate plants and speed up turnover in a highly competitive market. One of the largest groups within this class of users is the makers of automobiles and accessories. This class uses a total of more than 2,500 miles of wire.

In other process industries involving the use of large quantities of raw materials the plants are generally located at less accessible points, while the sales and general offices must, of course, be in the large center, near the distributor, the exporter or the consumer. This has influenced the adoption of telephone typewriter service by paper companies, makers of flour and other food stuffs and lumber companies. Nearly 5,000 miles of wire are used for this type of communication.

Besides these types of business, there are numerous other groups including hotels, department stores, insurance companies, police departments and railroads which use the telephone typewriter as a means of communication between various units.

Wide Range of Service

The flexibility of the telephone typewriter has adapted it to a wide variety of uses in the business world. Among the financial houses it handles sales and purchases of securities, market information and

numberless administrative matters where speed means a widened scope of activity.

The commercial or industrial enterprise has adapted it to an equally wide range of uses. The main office transmits specifications and orders for production and quickly obtains answers to inquiries by customers. The plant sends stock lists, information regarding shipments and requests for material.

The headquarters of a company is also able to inform branch offices quickly of price changes and special conditions which require concerted action. Through the close contact established by this channel of communication, the branch office can conduct its business in much the same way as if it were located in another room of the same building. It has access to the same information available at headquarters and is able, in large measure, to dispense with duplicate files and to carry on a much larger volume of business without increasing the office personnel.

One of the principal features of this service is the fact that it provides, at both sending and receiving stations, a written record—in plain English—of every message. There is no chance of inaccuracies or misunderstandings. This fact has induced many organizations using telephone typewriters to employ them for conferences between executives. The conversation is conducted with almost the same ease as if they were face to face, and at the conclusion each has a printed record, obviating misunderstandings and serving as a reminder of the points agreed upon.

A most significant feature of the telephone typewriter is the new and speedier service which the user is able, through close contact between plant, headquarters and branch office, to give his customers. When orders are placed the date on which they will be filled can be learned immediately from the plant. The manufacturing work can be followed closely thereafter until delivery is made. It is the same personal service which the customer gets at the shoe repair shop around the corner, where the same man takes his order and carries it out on the spot.

Farmers Fail To Press Legislation

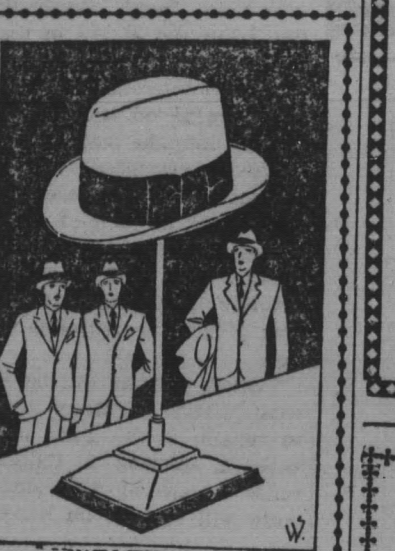

By LAWRENCE MONFORT
SACRAMENTO, April 4.—(CNB)—“The laborers are plenty, but the harvest is few” in California's agricultural fields, it appears today, if one may be permitted to paraphrase.

Sown bountifully with farm relief bills, the crop already is showings signs of premature baldness due to failure of the tiller of the soil to cultivate with the same diligence his proposed laws as he employs about the old homestead.

Choked with weeds of neglect, a number of bills are struggling to emerge from committee entirely unaided by the man with the hoe who helped plant them, and through no fault of farm bloc members, who, struggling with an atmosphere charged with investigations and bickerings, are working from 14 to 16 hours a day, and harder than they ever worked on their own broad acres.

Floods of letters and telegrams arrive protesting or endorsing bills furthering or opposing other interests, but farmers of California are not irrigating measures in their behalf with any united support, declare legislators who really have the interest of the agriculture at heart.

Letters of administration were asked in the Superior court here Wednesday by Hugh N. Nichols in the estate of his sister, Amy M. E. Nichols, who died in San Mateo on March 19. The petitioner is represented by T. H. Limpert, San Francisco attorney.

\$5 works more magic than used to come out of a silk hat.

To be sure we have Spring hats at higher prices—\$6, \$8.50 and \$10

But if cost is keeping any man and his fall hat together we just wanted him to know that at Gardiner's the price of \$5 does tricks.

You see the right shapes here at \$5.

You see the seasons shades here at \$5.

You can buy a fine hat here at \$5.

CAPITOL NEWS BRIEFS

By ESTO BROUGHTON

SACRAMENTO, April 4.—(CNP)—Completing its eighth week of Herculean labor at law-making today, the 1929 Legislature, settling down in earnest to clear the files before the opening of the Senate High Court of Impeachment next Monday.

Among the bills to move along on the legislative slate of first importance to 15 of the scenic mountain counties whose present contribution from the State Motor Vehicle Fund registers less than \$20,000 per annum is the Williams Bill. This will

guaranty every county in the state a minimum of that amount for local road purposes.

Representing that the "wear and tear" on rural roads was caused most by city itinerants, Assemblyman Dan Williams of Chinese Camp requested the unanimous support on the Motor Vehicle Committee.

"Scenic beauty and taxable wealth do not necessarily go hand in hand," Williams pointed out citing Mono county with 325 miles of county roads to support on \$2,000,000 taxable resources.

"Wild life in California may be preserved and conserved as the result of an investigation fostered by Assemblyman S. L. Helsing of Selma, who demands that an Assembly Committee of three look into the need for game refuges and breeding places for ducks, deer and other fowl, game and fish.

If California retains its place as a sportsman's paradise it must protect the spawning and breeding places of fish and game, the Fresno county legislator contends.

Matrimony has engaged the attention of the solons, though not to the exclusion of the consideration of hundreds of appropriation bills this week. For with the final enactment of the Budget bill carrying over \$246,000,000 in appropriations to carry on the state government for the next two years, the financial flood gates were opened in the Assembly Ways and Means Committee, which turned loose over two

hundred million dollars in appropriations.

Notice is hereby given by the undersigned administrator of the estate of MADEO DEVINCENZI, deceased, to the creditors of and all persons having claims against the deceased to file them, with the necessary vouchers, within four months after the first publication of this notice, in the office of the Clerk of the Superior Court of the State of California, in and for the County of San Mateo, or to the undersigned, within four (4) months after the first publication of this notice, to the end that the same may be settled and the necessary orders made thereon.

Jefferson's Birthday

Memorial Services at Jefferson's Tomb

By ELMO SCOTT WATSON

APHIL 13 is a day for honoring the memory of one of the most versatile Presidents the United States has ever had. It is the anniversary of the birthday of Thomas Jefferson and, although Congress has not yet acted upon the proposal to make it a national holiday, the anniversary is generally or locally observed by many Americans in recognition of Jefferson's services to the nation.

When Jefferson was approaching the end of his long and varied career, he composed the epitaph which he wished to have inscribed upon his tomb. It read: "Here was buried Thomas Jefferson, author of the Declaration of American Independence, of the Statute of Virginia for Religious Freedom, and the Father of the University of Virginia." If Jefferson were to be remembered for nothing more than these three things, his fame would be secure. But history has written these other achievements under his name. He was a member of the Continental congress, 1775-76 and a signer of the Declaration. In 1776 he was a member of the legislature of Virginia and a leader in important legal reforms. In 1779 he was governor of Virginia; in 1784 a member of Congress; from 1784 to 1789 he was United States minister to France; he was the first secretary of state, serving in Washington's cabinet 1789-94; he was Vice President 1797-1801; and he was the third President of the United States, 1801-1809. During his Presidency he made the Louisiana purchase from France, which carried the American flag in one giant leap from the Mississippi to the summit of the Rockies and paved the way for the extension of this country from sea to sea.

"Perhaps no other public man this country has ever had, not even the many-sided Roosevelt, has his much gifted Franklin, was so actively and so practically interested in so many and such varied matters," writes a recent historian. "He did not merely play, dabbled, or dilly-dally with these things, but went into each of them, whether it was some matter of science, agriculture, art, literature, history, or what not, with active interest and, usually, achieved something worthwhile with it."

Philosopher, scientist, artist and writer were roles he played to his own greatest satisfaction, according to another historian. "I was always fond of philosophy even in its drier form," he wrote while still a youth. "At other times his letters declare: 'Nature intended me for the tranquil pursuits of science by rendering them my supreme delight; science is my passion, politics is my duty,' and he said nothing more from such studies but his 'revolutionary duties.'"

In fact, the list of his interests and activities is an amazing one and recent historical researches have brought to light a great number of interesting facts about Jefferson that are little known to the average American. As a farmer Jefferson was far in advance of his time. On his Virginia plantation he

practiced rotation of crops long before this basic principle of scientific agriculture was thought of by a people who were to build a nation deeply rooted in the products of the soil. As a patron of the improvement of live stock in this country and the introduction of new fruits and vegetables he was in constant communication with men interested in these subjects, both in America and Europe. While he was President he laid the foundation for the modern system of government crop reporting by personally watching the markets of Washington for eight years and recording the earliest and latest appearances of 87 different farm products.

As a scientist his name is preserved in scientific records in the Latinized technical name of an extinct ground sloth whose fossil remains he was the first to describe, "Megalonyx Jeffersoni." When he sent Lewis and Clark on their famous exploring expedition into the newly-acquired territory beyond the Mississippi, one of the duties which he charged them was that of making accurate and complete records of the natural history of the region, the life of the native races, the fauna and flora, weather conditions and the like. It is not generally known, perhaps, but he was also interested in ethnology and in 1791 he made a tour of Long Island to visit the Indians of that region and to record their language. The result was a 200-word vocabulary of these Indians, the manuscript of which, in Jefferson's own handwriting is still preserved.

Rotation of crops and other forms of scientific agriculture, however, are not the only things for which the agriculture of today is indebted to Thomas Jefferson. When the farmer plows up an old meadow, turning the sod over upon itself, he can thank Thomas Jefferson, the inventor. For it was this man who invented the plow mold-board which makes modern grass-land plowing possible. When the motorist folds down the top of his car to get the full benefit of the cool breeze, he can thank Jefferson for the invention which makes it possible to do so. When the desk worker tilts back in his comfortable swivel chair or swings around easily instead of getting up and turning the chair, he should remember gratefully the name of Thomas Jefferson, for it was this Virginian who invented the only improvement in seating devices since the time of the early Egyptians. In fact, all inventors should look upon Jefferson as their patron saint. For when a man devises something new and establishes in court his right to it against those who would imitate it and profit thereby, he is indebted to Jefferson for laying down the principle upon which the United States patent office is founded.

No less interesting than Jefferson the scientist, and the inventor, is Jefferson the patron of fine arts. He was keenly interested in literature and was himself a writer of note. He was a musician and an accomplished violinist. It is recorded that when his early home, the house of his father at Shadwell, was burned in 1770, although he lost all of his books and papers, he rejoiced in the fact

that his violin was saved by a negro servant. As an artist he expressed himself best in architecture, and monuments to his architectural taste are to be found today in the beautiful buildings of Georgian style on the campus of the University of Virginia at Charlottesville, but many particularly on his estate nearby, the famous Monticello. Monticello was Jefferson's residence from 1770 until his death in 1826. Built under his personal direction after his ideas the house took more than 30 years for completion. He selected the site, supervised the clearing away of the hilltop, drew the plans and designs for the house, chose the stone and timber, directed the preparation of the former and the dressing of the latter, looked after the manufacture of the nails by his own servants, devised ingenious contrivances for comfort and convenience, designed the interior decorations and personally selected the furnishings and ornaments and laid out the grounds about the house.

The result of his work was pointed to in the early days as one of the few examples of beautiful architecture of which America could boast. Foreigners, traveling in this country during the Revolution and afterwards, often commented upon the beauty of the mansion. The marquis of Chateaufort wrote after a visit to Monticello: "Jefferson is the first American who has consulted the fine arts, to know how he would shelter himself from the weather." The duc de la Rochefoucauld-Liancourt who visited Jefferson in 1797, said: "Monticello, according to its first plans was infinitely superior to all other houses in America in point of taste and convenience."

As a statesman and a political leader, no finer tribute has ever been paid to this man who has given us the phrase "Jeffersonian Democracy" as a symbol of political thought, than that expressed by a recent biographer, Francis W. Hirst, says:

"To the students of political philosophy Jefferson is the most interesting of all American statesmen, because he combined with a marvelous insight into the springs of human nature and into the motives that sway individuals or masses an extensive knowledge of political science and history. He was a theorist, but always at school with experience. Among the founders of the Great Republic the statesman who wrote the Declaration of Independence and added Louisiana to the Union can never be forgotten. To those who, in spite of failures and disappointments, still rest their hopes of peaceful and civilized progress on representative government and popular education, Jefferson is a prophet, and more than a prophet. By those who believe that the success of democratic institutions and the establishment of good-will between nations and classes depend on a wide dissemination of liberal ideas the author of the Statute of Religious Freedom and the successful opponent of the sedition laws will be deemed not unworthy of a place beside Milton and Hampden and other heroes of men who, down to our own times, have withstood the tyranny of priest, soldier, monarch or bureaucrat. Those, again, who love republican frugality and simplicity, who wish their ministers to be thrifty stewards of public money, and would equalize opportunity, partly by a just system of taxation, partly by judicious expenditure on public health and education, will learn alike from the precepts and practice of Jefferson that no one—not even a Peel, a Cobden, or a Gladstone—did more to graft these fruitful aims and golden rules of administration upon a new democracy."

Old-Time Campaigning

The man who drove Abraham Lincoln and Stephen A. Douglas around Illinois in 1858 for their famous series of debates is still alive. He is W. N. Wiley of The Dalles, Wash., hale and hearty at ninety. There were no private trains for Presidential candidates then. The two rivals were compelled to move from town to town seated in a covered farm wagon, behind a team of sturdy horses driven by Wiley. It

was the custom of both candidates, Wiley recalls, to offer lifts to foot-weary travelers whom they passed on the road. Placing the newly found friend between them, they tried to draw him out on the political situation, without revealing their identity, attempting to get an insight into unadulterated public opinion.

Profit From Lobsters

At Monhegan Island this last winter, twenty miles out at sea off the Maine coast, forty lobster fishermen operate

from 100 to 200 traps each, which cost them \$3 apiece. Boats are also equipped with power lifters operated from the marine motors. Fishing is done in water 250 to 400 feet deep and the lobsters are the largest and finest caught anywhere in American waters. A few of the most industrious Monheganites make from \$2,000 to \$4,000 in their eight months season of lobstering, which begins on November 1 and ends June 23.

Alligator hide footwear is a skin.

Famous Old Fort

Fort Wayne, on the Detroit river, was begun in 1813 and was completed in 1815 at a cost of \$150,000. It was not occupied until December, 1881. The common used on the walls were 10-inch muzzle-loading cast-iron guns, which soon became obsolete. In the spring of 1882 they were ordered dismantled, the guns being removed from their carriages and rolled out to the parade ground. The only gun

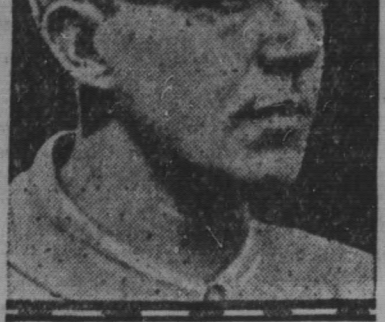

now on the walls is a saluting cannon, which salutes the flag daily. The fort was abandoned in the summer of 1927, but was reorganized in September, 1928.

Picture in a Jewel

A magnificent black opal, discovered on the Waggett fields of New South Wales, has been valued at from \$15,000 to \$25,000, and christened "Light of the World." The distinct outline of a woman's figure may be seen in the middle of the gem.

Southworth's Career Unique

SINCE Billy Southworth has been called to head the Cardinals this season there has been more or less humorous speculation on how long he will hold the job. Even Billy's friends, and they comprise about 99 per cent of the folks interested in baseball, do not think he will last long. They say he is too nice and easy going for the difficult task of handling a team of temperamental champions. But San Brendon, his boss, shrewd, keen and successful in business and in baseball, thinks differently. "I know Southworth better than a lot of people," declared Brendon while in New York at the February schedule meeting, "and I watched him pretty close to know something about him. I think he will make a successful leader for the Cards. He has plenty of character and firmness for the job for all that he is such a nice fellow. And I would have to be sure he had these qualities, before turning over the club to him, even if he were the nicest fellow in the world."

Billy Southworth.

Southworth's baseball career is unique. A fine fielder, a natural hitter, fast, smart, likable, temperate in his habits, yet with all these he toiled in the baseball yards of eight minor-league clubs for fourteen years before he achieved stardom. And mind you, when he sealed the heights for the Cardinals in their pennant drive of 1926, it was just after his most dismal and discouraging failure of all with McGraw of the Giants. From the very beginning of his baseball career with Portsmouth, Ohio, back in 1912 Southworth was always brushing the fringes of fame, but something intervened every time his gloved hand clutched the laurel or his bat was about to bring him the baseball boys.

For instance: He played so well for Portsmouth before he was twenty that Cleveland signed him and farmed him to Toledo. A broken ankle set him back, but he was leading the international league in hitting when Cleveland recalled him in the middle of the 1915 season. Here was his chance, but he slumped in his hitting and was sent to the Pacific coast. He led the Portland club in everything during the 1916 season and refused to play again in the majors for the salary offered by Cleveland when he was called back. He was sold to the Pirates who promptly farmed him to Birmingham.

He played such wonderful ball in the Southern association that the Pirates recalled him in 1918, but while he fielded a million and was fast as a streak on the bases, yet his hitting did not reach the coveted and required .300 mark. So it was he went to Boston in 1921 in the trade that brought Maranville to the Pirates. In Boston, Southworth climbed over that .300 batting mark and seemed to be sure on his way to stardom. McGraw grabbed him as just the man he wanted to round out his outfield in the Bancroft deal with the Braves in the winter of 1923, but in two seasons with the Giants Southworth simply could not get going.

And then it was that William H. Southworth arose in his might and came into his own. He batted .320 that year for the Cards and was a vital cog in their pennant machine. His home run against the Giants late in the season clinched the pennant. His home run in the second game of the world series turned the tide against the Yankees. A bad ankle the next year sent him to Rochester to be manager of a Cardinal farm. He won the international flag last year and resumed his great play in the outfield.

And now Southworth comes back to the majors as a manager. He says he may play. A most likable and interesting fellow is the new boss of Brendon's ball club. Southworth is smart. He studies the game. He is much given to reflection. Southworth is thirty-five.

BASEBALL NOTES

The Athletics have two outfielders from the college ranks—Hume and Borrell.

Plans to reorganize the old Michigan-Ontario league have been abandoned for the present.

Charley Berry, Red Sox catcher, has signed to coach football at Grove City college two more years.

Newark has 41 players, among them nine outfielders. Four of the nine outfielders will be used in trades.

The Cardinals will have a fast man in reserve in Fred Haney, bought from Indianapolis. Haney stole 43 bases in the Association.

The latest idea is that Babe Ruth's legs are going bad. This is a drawback: It will take longer to round the bases 59 times a year in a wheel-chair.

Although he was one of Notre Dame's best punters while in college, Young Ed Walsh couldn't play football because his dad feared an injury might ruin his major league baseball career.

The world champion Yankees consumed an average of two hours and four minutes for each game played during the 1928 season, outdoing all other American league teams in this respect.

Pitchers Carl Littlejohn and Dick Whitworth of the Houston, Texas, league, baseball club, at St. Louis Cardinals' farm, have been traded to Fort Worth for Paul Wachtel, veteran spitballer.

If sports were conducted on the lines of art-collecting: "According to two connoisseurs, testifying in court today, the Babe Ruth who has played the New York outfield the past two years is spurious."

Everett Scott has signed his contract with the Reading team of the International league. The veteran, who did well with that club last season, will serve as utility fielder and assistant to Manager Harry Hinchman.

It is reported that Dazzy Vance, the strikeout king of the National league, is asking a contract for \$25,000 from the Brooklyn club for the 1929 season. He led the pitchers of both leagues in strikeouts for the past seven years.

Charles O'Leary, Yankees' coach, has shared in the winnings of ten championship teams since he started with the White Sox in 1900. He has been with Miller Huggins in all of the latter's successes in the American league.

Stanley Coveleski, former iron man of the Cleveland Indians' hurling staff, has signed with the South Bend Indians' semi-pro team for 1929.

Charles ("Chick") Hefey, St. Louis Cardinal outfielder and the team's leading hitter last season, will begin this year equipped with spectacles.

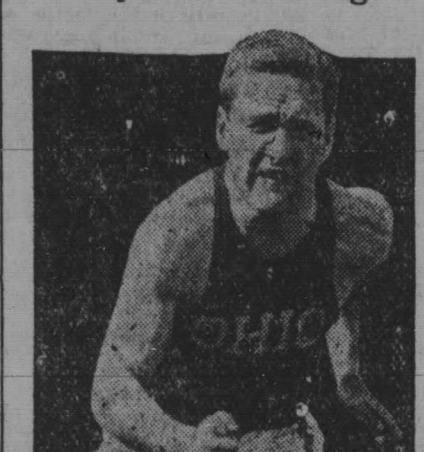

The Eastern series of the American Legion baseball tournament will be staged in Washington and the Western in Denver with St. Louis or Cleveland getting the Junior world's series.

Hawkeyes Are Planning Huge Waterproof Field

If the proposed plan of William J. Botz, Omaha lawyer and University of Iowa alumnus, is accepted by the Hawkeye athletic council, Old Gold gridders and spectators will be afforded protection from inclement weather during future football contests in the new Iowa stadium, which is to be completed by next fall.

Botz proposes that tall steel masts, erected about the outer wall of the stadium, support heavy steel cables traversing the length of the field, which will, in turn, support a balloon silk water-proofed canvas cover.

Important Ohio Cog

Howard Kress is an important cog in the Ohio State university sprint relay team which won at the Ohio relays, the Penn relays and the Texas relays last year, equalling the Interstate record in the 440 at the latter meet.

Sorrel Tops Rule

Red heads reign royally at the University of Florida. No less than three sorrel tops have been named captains of various varsity teams.

Bill Duckwall leads the golfers. Edgar Curry shows the pace for the leather-pushers and Gus Feuer tops the tennis team.

Carr's New Job

Charley Carr, the old-time first sacker, who probably would be a 400 sacker in these days, now devotes all of his time to his sporting goods manufacturing business, but remains one of the best informed men in the country on baseball. He has been making the rounds of the minor league meetings, putting his ball over with the magnates. One of the latest loops to adopt the Charles C. Carr spheroid is the Southeastern. The Southern and Western also use it.

NUCLEUS OF OLD CHAMPION TEAM

Evers, Gowdy and Maranville Return to Braves.

Back in 1914, the Boston Braves were in last place in July, 19 games behind the leaders and apparently going nowhere, as usual.

George Stallings invoked a "miracle," and the Braves won the National league pennant and later the World series with the Philadelphia Athletics in four straight games.

Just how much credit is due the "miracle" for that most amazing form reversal in the history of baseball and how much is due the players who made it possible cannot be told with any degree of certainty in this still unlighted age.

But the keystone combination and the hard-hitting catcher who formed the nucleus of those amazing Braves of 15 seasons ago will be back with the club in 1929.

Evers, Maranville and Gowdy, names to compare with in 1914, have once more joined their old club. It may be that Judge Emil Fuchs believes he can build another winner upon the gray matter of the past.

The Boston Braves have never approached a performance equal to that of 15 seasons ago. They have gone steadily downhill, despite the efforts of many masters.

Last year, even with Rogers Hornsby and some promising pitching material, the Braves were the disappointment of their backers in the Hub.

This year, Judge Fuchs will take matters in his own hands, he says, and manage the club himself. His first move was to gather about him Johnny Evers, Hank Gowdy and Rabbit Maranville, heroes of that 1914 drive.

Johnny Evers will be Fuchs' assistant as manager of the club. Hank Gowdy will be a coach, a scout, a great help to young pitchers. Rabbit Maranville will play shortstop.

White Sox Get Autry

Martin G. Autry, catcher, formerly with the Yankees and Cleveland Indians, has been traded to the Chicago White Sox for Outfielder Bib Falk.

Sporting Squibs

Vancouver, British Columbia, is the under for the next \$50,000 Wrigley marathon swim.

Fred Hoyde of Minnesota and Robert Hickman of Illinois, two Big Ten football players, have been elected to Rhodes scholarships.

Phil Raymond, Baltimore boxer, is managed by his brother Frank and with four other brothers and cousins, who are also boxers, help to train each other.

The West Allis Presbyterians church in Milwaukee, Wis., plans to hold boxing classes with Pinky Mitchell, former junior welterweight champion, as the tutor.

Despite the fact that he has inherited \$50,000 and an automobile sales and repair shop, Larry Fagan, New Jersey boxer, is going to continue his ring career.

In the first half of the school year North Carolina won varsity and freshman football titles of the state, and the cross-country team for the third time won the southern title.

Ted Sandwina, American holder of the French heavyweight boxing championship, is a member of the circus family, famous for the bodily strength and athletic prowess of each of its members.

Golf has been made a community proposition in the village of Shorewood, Wis. A professional has been engaged by the town's board to give free instruction in the fine points of the game.

Golf is making rapid strides in Japan since the emperor and members of the royal household took up the game. Two new 18-hole courses have been opened at Kawapa and at the Atami Hot Springs.

Carl Williams, who stepped down as manager of the Wichita Falls team of the Texas league last midseason, has been offered the management of the Abilene team of the West Texas league. This is a Wichita Falls farm.

An 18-hole municipal golf course is being laid out at Atlanta, Ga., and will be named for its most famous citizen, Bobby Jones.

Among the army of young heavyweights trying for Gene Tunney's abandoned crown is Jack Gross, a southpaw, of Philadelphia.

Al Granda has participated in 48 six-day bicycle races during the last 20 years. After another six day round this year and a couple of sprints next summer he will retire.

Are You Ready

When your Children Cry for It

Baby has little upsets at times. All your care cannot prevent them. But you can be prepared. Then you can do what any experienced nurse would do—what most physicians would tell you to do—give a few drops of plain Castoria. No sooner does than Baby is soothed; relief is just a matter of moments. You have eased your child without resort to a single doubtful drug; Castoria is vegetable. So it's safe to use as often as an infant has any little pain you cannot pat away. And it's always ready for the cruelest pangs of colic or constipation or diarrhea; effective too, for older children. Twenty-five million bottles were bought last year.

Fletcher's CASTORIA

PARKER'S HAIR BALM
Removes dandruff, keeps hair soft and shiny. 50 cents by mail or at drug stores. H. L. Parker, Chicago, Ill.

FLORESTON SHAMPOO—Ideal for use in connection with Parker's Hair Balm. Removes hair dirt and dandruff. 50 cents by mail or at drug stores. H. L. Parker, Chicago, Ill.

Too much of anything is bad.

Attitude of mind is individuality.

WHEN IT LOOKS DARK to my weak, nervous or ailing woman, Dr. Pierce's Favorite Prescription comes to her aid. Women in every walk of life today say "Dr. Pierce's Favorite Prescription is a reliable medicine. It is made from roots and herbs, sold by druggists, in both fluid and tablet form."

Mrs. J. E. Day, 1111 1/2 St. San Francisco, Calif., said: "For a long time I suffered from woman's trouble. I was so nervous that I never got a good night's rest, but when I saw my back was aching and when I could scarcely do anything, but after taking a few bottles of Dr. Pierce's Favorite Prescription I was in good physical condition, my nerves quieted, and I was feeling so well one would think I never had a sick day."

Send 10c for trial pkg. tablets to Dr. Pierce's Invalids Hotel, Buffalo, N. Y.

No man who likes to work is likely to steal.

You Need Borax

Do you know of the "Everyday Personal Uses of Borax and Boric Acid"? A free booklet by that name tells you about them. Write to Pacific Coast Borax Co., Dept. Y, 100 William St., New York City, for your copy.—Adv.

And how would a red and gold land wagon look if it were an automobile?

WHAT DR. CALDWELL LEARNED IN 47 YEARS PRACTICE

A physician watched the results of constipation for 47 years, and believes that no matter how careful people are of their health, diet and exercise, constipation will occur from time to time. Of next importance, then, is how to treat it when it comes. Dr. Caldwell always was in favor of getting as close to nature as possible, hence his remedy for constipation, known as Dr. Caldwell's Syrup Pepsin, is a mild vegetable compound. It can not harm the system and is a habit forming. Syrup Pepsin is pleasant tasting, and youngsters love it.

Dr. Caldwell did not believe in drastic physics and purgatives, and he believes they were good for anybody's system. In a practice of 47 years he never saw any reason for their use when Syrup Pepsin will empty the bowels just as promptly.

Do not let a day go by without a bowel movement. Do not sit and hope but go to the nearest drug store and get one of the generous bottles of Dr. Caldwell's Syrup Pepsin, or write Dr. Caldwell, Dept. BB, Monticello, Minn. for free trial bottle.

SUCH IS LIFE --- Shaking Helps -- By Charles Sughrue

WHAT IS CALLED CONVERSATION

By THOMAS ARKLE CLARK
Dean of Men, University of Illinois.

Mrs. Allen had been very unhappy at Bath when she and her husband with their friend, Catherine Moreland, as guest went down for a few weeks' holiday. She had been very unhappy, indeed, I say until she met Mrs. Thorpe, an old acquaintance of hers whom she had not seen for years. Now she had someone to talk to, and at once the two old friends indulged in what they called conversation in which Miss Austin tells us "there was scarcely any exchange of opinion and not often any resemblance of subject, for Mrs. Thorpe talked chiefly of her children and Mrs. Allen of her gowns." Neither one expected or cared for any particular response from the other. It was quite sufficient that there was a listener who would not attempt to stem the flow of words.

What is called conversation's often only two people in juxtaposition each of whom has an opportunity to give

a monologue upon his own particular, and favorite topic, whatever that may be.

When Mrs. Faris has been out of town for a time and is back in her own house all she wants is a chance to tell about her trip. Let her get started and you can go about your business quietly and without your saying a word she will run on for an hour giving every detail of what she said and what they saw and what everyone did and thought. She leaps from one topic to another with the agility of a mountain goat and would be quite surprised if anyone should indicate that the vocal exercise in which she is indulging is not conversation.

Gregory has opinions—very definite and settled opinions which he is eager and glad to expound to anyone whose ear he can get for a few minutes. He drops into a group of men or he is invited to a dinner party, and immediately he takes matters into his own hands and begins what he would term a conversation with his friends. In point of fact it is an exposition, it is a discourse, it is an oration. It is a play of words in which Gregory takes all the parts. If you will listen to Gregory for a few minutes he will tell you exactly how the difficulties in which the farmer now finds himself can be amicably settled. He knows who is going to be the next President of the United States and why, and he has a solution of the problem of the unemployed which, if people would only listen to him, would put an end to strikes, labor riots, and general discontent. While Gregory is talking he expects rapt and undivided attention. He doesn't like being interrupted or questioned while he is engaged in what he calls conversation. Every community, every organization, every group of a half dozen gathered together has its monologue artist like Gregory who labors under the delusion that when he is monopolizing the talk he is engaging in conversation.

RYDER CUP PLAYER

"Ed" Dudley, one of the ten "pros" who will represent America in the Ryder Cup matches to be held on the Moortown course, England, resting after several rounds of golf on the course at Sea Island Beach, Ga.

Old-Age Pensions

New York.—The cause of old age pensions was furthered in various states recently to a greater extent than at any period in the past, the bulletin of the American Association for Old Age Security states. There was legislative activity in 25 of the 48 states in the country, according to the bulletin, and a total of 10 individual bills were introduced in legislatures of those states.

"All signs point to New York soon becoming the first industrial state in the East to put into operation an effective system of old-age pensions," the bulletin says. "The past month has made considerable history in the movement for this legislation in the empire state. The unanimity with which the divergent groups in the state have endorsed the subject has surprised even the most sanguine advocates of the cause of the aged."

The bulletin then relates a brief history of the popular movements in furtherance of the pension project which developed during the month. The first step was the calling of a conference on the subject by Dr. Charles H. Johnson, director of the State Board of Charities. This culminated in the establishing of a permanent conference supported by some ninety organizations, including labor groups, charitable and social organizations and civic and fraternal bodies. A summary of action in the twenty-five state legislatures where old-age pension bills have been introduced is printed in the bulletin. The age requirement ranges from sixty to seventy years; the amount of pension from \$20 to \$50 a month; while the funds are to be raised in some cases by the states, in some by the counties and in some by both.

Picks Singing Birds

New York.—Otto can't speak English, but he can pick a singing canary out of the flock of 8,000, all chirping at once.

Otto is a German boy, one of several upon whose judgment the canary like, being interrupted or questioned while he is engaged in what he calls conversation. Every community, every organization, every group of a half dozen gathered together has its monologue artist like Gregory who labors under the delusion that when he is monopolizing the talk he is engaging in conversation.

cordant note hangs always in the air. But Otto does not depend on his ears. He watches their necks and when he sees a movement in the feathers under the beak that indicates to him a song instead of a chirp he makes a chalk mark on the cage. The birds who have burst into unheard song then are segregated for sale to retailers as warblers who really warble.

It is obvious, therefore, that canary voices are discovered after the yellow midgets arrive on this side. Not so, however, with the opera stars of the bird world, the bullfinches.

Bullfinches are patiently trained by organists or harpists makers in their native Germany. The latter whistle one song over and over again to birds suspended in cages over their benches until the pupils have memorized an entire selection. Some learn as many as three songs. These birds, of course,

bring the highest price, which is \$100.

In canary-breeding time in the Harz mountains of Germany the stock to be hatched this spring will be laid by for export next year. The birds are kept in warehouses overseas one New York dealer alone having 23,000 of last year's crop waiting to be brought over.

The songsters arrive weekly, each of several wholesalers in town receiving from 3,000 to 6,000 in a consignment. They are purchased for storage from breeders' clubs in the mountains, similar, it seems, to farm marketing groups in this country.

ENGLISH BEAUTY

An excellent camera story—resembling a Romney portrait—of Lady Pamela Smith, younger daughter of Lord and Lady Birkenhead (Lord Birkenhead is the former secretary for India). Lady Pamela is just fifteen, and is called London's prettiest debutante—noted especially for her beautiful eyes.

Stockholm Plans Central Plant to Heat Whole City

Stockholm.—A central steam plant for the distribution of heat and hot water to whole sections of the city is being planned for Stockholm. Similar installations have previously been made here on a smaller scale in apartment houses owned by the Stockholm Rent Payers' association. A committee has now been appointed by the city to investigate the possibility of establishing larger plants.

Keep an Eye on the Old Rascal!

Woman at Throttle Makes Schedule Time

Giljon, Spain.—Senorita Pilar Carmona of Madrid, Spain's first woman railroad engineer brought the Madrid express in to Giljon recently on schedule time.

The chief of the machine department of the Northern Trunk and another engineer sat beside Senorita Carmona who has just graduated from the Engineers' school.

Women Hunters Into Carolina Preserves

North Shell Island, S. C.—Capt. W. D. Jaskill, who owns a shooting lodge on this island, is making preparations to install facilities here for visiting sportswomen.

For a great many years the Pamlico sound on the coast of North Carolina has been visited by sportsmen who come here for goose, duck and brant shooting. This season the gathering has been augmented by a number of prominent sportswomen from the northern states.

A group of hunters have notified Captain Jaskill that they expect to bring their wives here next season if he will make arrangements to accommodate them.

Court to Decide Worth of Singing Dog's Voice

Budapest.—The Hungarian Supreme court will soon have to decide how much the voice of a dog is worth. The case which will be brought up concerns, however, not the voice of an ordinary dog but that of a canine artist, the "singing" dog and vaudeville star Sambo.

Sambo was shot by Count Esterhazy while strolling with his master in the Tata park. The count, to whom the park belongs, suspecting Sambo of

DIPPING INTO SCIENCE

Why We Walk in Circles
Lost in heavy snow storms, or in forests, or when walking with our eyes closed, persons usually do not walk in a straight line but rather in large circles. This is because we take unequal strides. Actually, although not noticeable, one leg is usually a trifle longer than the other, causing one step to be just a bit longer.

(© 1928, Western Newspaper Union.)

Cleopatra's Needles

Washington.—About 3,500 years ago Thothmes III, king of Egypt, reared himself a tall obelisk at the temple of Heliopolis, six miles from present-day Cairo. Americans interested in deciphering the cuneiform script covering the obelisk need not travel to Egypt for that purpose. Thothmes, royal monument, for almost 40 years, has raised its head in Central park, New York city.

From the Thames embankment in London a companion obelisk also looks on another world than that of ancient Egypt. It is the second obelisk of the pair erected in Heliopolis to commemorate the glory of the god, Amen-Ra.

"The title of Cleopatra's Needle is claimed for both the New York and London obelisks," says a bulletin from the National Geographic society.

"During the lifetime of Cleopatra the two obelisks were moved from Heliopolis to Alexandria. It is affirmed that this removal was by Cleopatra's decree, but that the fabulous times during the latter years of her reign prevented their being raised.

"While they were lying on the Alexandria sands the name Cleopatra's Needles was said to have been given them. History does not record valid evidences of Cleopatra's interest in needles of stone or other material. It was during the reign of Augustus Caesar that the obelisks were finally mounted.

"The New York obelisk, more than 67 feet high, was presented to the United States by the Egyptian government. Its removal to New York presented a novel problem because of its

excessive weight. The obelisk was lowered to a wooden caisson, in which it was floated to the dock and was placed in the steamship which carried it to America by opening a port in her bow. On its arrival it was transported by rail to Central park, where towers and trunions were used in raising it. The London obelisk was removed from Egypt in 1880. It had been presented to King George IV by Mohammed Ali in 1819, but no effort was made to remove it for many years. Finally it was incased in a steel cylinder and shipped to England in the obelisk ship Cleopatra.

"Although Egypt is the home of the obelisk, there are today more of these monuments outside Egypt than in it. The practice of denuding Egypt of her obelisks began during the Sixth cen-

tury, B. C., when Ashurbanipal, the Assyrian, removed a pair to Nineveh. At present Egypt has four at Karnak and also the Mataria and Luxor obelisks. Rome has 12 of various sizes. Constantinople has two and England America and France each have one. The largest of these is in the piazza of St. John Lateran at Rome. The material used in the obelisks is a pink granite from the quarries of Aswan, anciently Syene.

"Obelisks have always exercised a fascination for the student of Egyptology. Archeologists have yet to discover how the ancient Egyptians, ignorant of modern methods of transport, moved these huge blocks of granite hundreds of miles and then set them up in the midst of existing buildings."

Plan to Move Body of Chopin Starts Fuss

Paris.—The admirers of Frederick Chopin are engaged in a bitter quarrel over the proposed to remove the composer's body from Pere-Lachaise cemetery in Paris, where it was buried 70 years ago, and take it to his native Poland for reburial.

The suggestion that the body be moved started with a group led by M. Edouard Ganche. They wanted the body to lie in state beside the remains of Poland's heroes, Kosciuszko,

Mickiewicz, Marshal Poniatowski and Slowacki in the Wawel, which is Poland's "Westminster Abbey."

M. Ganche contends that if it were not for strife raging in Poland at the time of Chopin's death, the musician would undoubtedly have been buried there. Instead he died and was buried in Paris, and now a great monument depicting a muse, weeping over a stilled lyre stands over his tomb, which is the pilgrimage place of many music lovers.

The principal objection to the removal is that Chopin's ashes have

probably completely disappeared. It is further argued that Chopin's father was a Frenchman, born at Nancy.

Women Hunters Into Carolina Preserves

North Shell Island, S. C.—Capt. W. D. Jaskill, who owns a shooting lodge on this island, is making preparations to install facilities here for visiting sportswomen.

For a great many years the Pamlico sound on the coast of North Carolina has been visited by sportsmen who come here for goose, duck and brant shooting. This season the gathering has been augmented by a number of prominent sportswomen from the northern states.

A group of hunters have notified Captain Jaskill that they expect to bring their wives here next season if he will make arrangements to accommodate them.

Court to Decide Worth of Singing Dog's Voice

Budapest.—The Hungarian Supreme court will soon have to decide how much the voice of a dog is worth. The case which will be brought up concerns, however, not the voice of an ordinary dog but that of a canine artist, the "singing" dog and vaudeville star Sambo.

Sambo was shot by Count Esterhazy while strolling with his master in the Tata park. The count, to whom the park belongs, suspecting Sambo of

DIPPING INTO SCIENCE

Why We Walk in Circles
Lost in heavy snow storms, or in forests, or when walking with our eyes closed, persons usually do not walk in a straight line but rather in large circles. This is because we take unequal strides. Actually, although not noticeable, one leg is usually a trifle longer than the other, causing one step to be just a bit longer.

Pauline Meets "White Mouse"

Mrs. Nicholas Longworth, wife of the speaker of the house, with her daughter, Pauline, Vice President Curtis and Spotted Crow with her baby, White Mouse, at the Vice President's office. Spotted Crow is a member of the Indian tribe which visited Washington for the inauguration.

Radiola 18

- gets the best that's on the air

Most popular type of Radiola ever designed. Faithful, realistic reproduction over a wide range. Inexpensive operation from house current.

'95 for alternating current (less Radiotron)

Ask the nearest RCA Radiola Dealer to demonstrate the "18" for you and tell you about the RCA Time Payment Plan.

RCA RADIOLA

MADE BY THE MAKERS OF THE RADIOTRON

A man on his good behavior to get out of prison, shows he knows how to practice good behavior, all right.

Three Generations Endorse It

"When I was a young single girl I took Lydia E. Pinkham's Vegetable Compound because my mother did and she gave it to me. After I married I took it before my children were born and afterwards, and I have eight living children. I am now a grandmother and still take it and still recommend it when any one is tired and run-down."—Mrs. Alfred Iverson, St. Edwards, Nebraska.

Lydia E. Pinkham's Vegetable Compound

Never is the feminine fashion exactly as you would have it; nor is it so to the feminine notion, either.

NICE WORDS WON'T DYE a dress or coat...

Neither pretty pictures nor colorful adjectives will dye a dress or coat. It takes real dyes to do the work; dyes made from true anilines.

Next time you have dyeing to do, try Diamond Dyes. See how easy it is to use them. Then compare the results. Your dealer will refund your money if you don't agree they are better dyes.

You get none of that re-dyed look from Diamond Dyes; no streaking or spotting. Just fresh, crisp, bright new color. And watch the way they keep their brilliance through wear and washing. They are better dyes because they contain plenty of real anilines—from three to five times more than other dyes.

The white package of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye or fast silk, wool, cotton, linen, rayon or any mixture of materials. The blue package is a special dye, for silk or wool only. With it you can dye your valuable articles of silk or wool with results equal to the finest professional work. When you buy—remember this, The blue package dyes silk or wool only. The white package will dye every kind of goods, including silk and wool. Your dealer has both packages.
